QUESTION 1

HOTSPOT

You have an Azure web app named App1 that has two deployment slots named Production and Staging. Each slot has the unique settings shown in the following table.

Setting	Production	Staging
Web sockets	Off	On
Custom domain name	App1-prod.contoso.com	App1-staging.contoso.com

You perform a slot swap.

What are the configurations of the Production slot after the swap? To answer, select the appropriate options in the answer area.

NOTE: Each correction is worth one point.

Hot Area:

Answer Area

Web sockets:

Custom domain name:

Correct Answer:

Answer Area

Web sockets: Off On

Custom domain name:

QUESTION 2

You are building a custom Azure function app to connect to Azure Event Grid.

You need to ensure that resources are allocated dynamically to the function app. Billing must be based on the executions of the app.

What should you configure when you create the function app?

- A. the Windows operating system and the Consumption plan hosting plan
- B. the Windows operating system and the App Service plan hosting plan
- C. the Docker container and an App Service plan that uses the B1 pricing tier
- D. the Docker container and an App Service plan that uses the S1 pricing tier

Correct Answer: A

Azure Functions runs in two different modes: Consumption plan and Azure App Service plan. The Consumption plan automatically allocates compute power when your code is running. Your app is scaled out when needed to handle load, and scaled down when code is not running.

Incorrect Answers:

B: When you run in an App Service plan, you must manage the scaling of your function app.

QUESTION 3

You have an Azure virtual network named VNet1 that connects to your on-premises network by using a site-to-site VPN. VNet1 contains one subnet named Subnet1.

Subnet1 is associated to a network security group (NSG) named NSG1. Subnet1 contains a basic internal load balancer named ILB1. ILB1 has three Azure virtual machines in the backend pool.

You need to collect data about the IP addresses that connects to ILB1. You must be able to run interactive queries from the Azure portal against the collected data.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Resource to create:	<input type="checkbox"/> An Azure Event Grid
	<input checked="" type="checkbox"/> An Azure Log Analytics workspace
	<input type="checkbox"/> An Azure Storage account
Resource on which to enable diagnostics:	<input type="checkbox"/> ILB1
	<input checked="" type="checkbox"/> NSG1
	<input type="checkbox"/> The Azure virtual machines

Correct Answer:

Resource to create:	<input type="checkbox"/> An Azure Event Grid
	<input checked="" type="checkbox"/> An Azure Log Analytics workspace
	<input type="checkbox"/> An Azure Storage account
Resource on which to enable diagnostics:	<input checked="" type="checkbox"/> ILB1
	<input type="checkbox"/> NSG1
	<input type="checkbox"/> The Azure virtual machines

Explanation/Reference:

Box 1: An Azure Log Analytics workspace

In the Azure portal you can set up a Log Analytics workspace, which is a unique Log Analytics environment with its own data repository, data sources, and solutions

Box 2: ILB1

References:

<https://docs.microsoft.com/en-us/azure/log-analytics/log-analytics-quick-create-workspace>

<https://docs.microsoft.com/en-us/azure/load-balancer/load-balancer-standard-diagnostics>

QUESTION 4

You have an Azure web app named WebApp1 that runs in an Azure App Service plan named ASP1. ASP1 is based on the D1 pricing tier.

You need to ensure that WebApp1 can be accessed only from computers on your on-premises network. The solution must minimize costs.

What should you configure? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Pricing tier for ASP1:

	▼
B1	
P1v2	
S1	

Settings for WebApp1:

	▼
Cross-origin resource sharing(CORS)	
Networking	
SSL	

Correct Answer:

Pricing tier for ASP1:

	▼
B1	
P1v2	
S1	

Settings for WebApp1:

	▼
Cross-origin resource sharing(CORS)	
Networking	
SSL	

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure web app named App1. App1 runs in an Azure App Service plan named Plan1. Plan1 is associated to the Free pricing tier.

You discover that App1 stops each day after running continuously for 60 minutes.

You need to ensure that App1 can run continuously for the entire day.

Solution: You change the pricing tier of Plan1 to Basic.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

The Free Tier provides 60 CPU minutes / day. This explains why App1 is stops. The Basic tier has no such cap.
