**QUESTION 1**

You need to resolve the Active Directory issue. What should you do?

- A. From Active Directory Users and Computers, select the user accounts, and then modify the User Principal Name value.
- B. Run idfix.exe, and then use the Edit action.
- C. From Active Directory Domains and Trusts, modify the list of UPN suffixes.
- D. From Azure AD Connect, modify the outbound synchronization rule.

Correct Answer: B

IdFix is used to perform discovery and remediation of identity objects and their attributes in an on-premises Active Directory environment in preparation for migration to Azure Active Directory. IdFix is intended for the Active Directory

administrators responsible for directory synchronization with Azure Active Directory.

Scenario: Active Directory Issue

Several users in humongousinsurance.com have UPNs that contain special characters. You suspect that some of the characters are unsupported in Azure AD.

QUESTION 2

You plan to deploy a site-to-site VPN connection from on-premises network to your Azure environment. The VPN connection will be established to the VNET01-USEA2 virtual network.

You need to create the required resources in Azure for the planned site-to-site VPN.

The solution must minimize costs.

What should you do from the Azure portal?

NOTE: This task may a very long time to complete. You do NOT need to wait for the deployment to complete this task successfully.

A. Answer: See below.

Correct Answer: A

We create a VPN gateway.

Step 1:

On the left side of the portal page, click + and type '\\Virtual Network Gateway\\' in search. In Results, locate and click Virtual network gateway.

Step 2:

At the bottom of the "Virtual network gateway" page, click Create. This opens the Create virtual network gateway page.

Step 3:

On the Create virtual network gateway page, specify the values for your virtual network gateway. Gateway type: Select VPN. VPN gateways use the virtual network gateway type VPN. Virtual network: Choose the existing virtual network

VNET01-USEA2 Gateway subnet address range: You will only see this setting if you did not previously create a gateway subnet for your virtual network.

Step 4:

Select the default values for the other setting, and click create.

Create virtual network gateway

* Name
VNet1GW ✓

Gateway type ⓘ
☒ VPN ☐ ExpressRoute

VPN type ⓘ
☒ Route-based ☐ Policy-based

* SKU ⓘ
VpnGw1 ▼

☐ Enable active-active mode ⓘ

* Virtual network ⓘ
Choose a virtual network >

* Public IP address ⓘ
☒ Create new ☐ Use existing

The settings are validated and you'll see the "Deploying Virtual network gateway" tile on the dashboard. Creating a gateway can take up to 45 minutes.

Note: This task may take a very long time to complete. You do NOT need to wait for the deployment to complete this task successfully.

QUESTION 3

You have an Azure subscription named Subscription1 and an on-premises deployment of Microsoft System Center Service Manager.

Subscription1 contains a virtual machine named VM1.

You need to ensure that an alert is set in Service Manager when the amount of available memory on VM1 is below 10 percent.

What should you do first?

- A. Create a notification.
- B. Create an automation runbook.
- C. Deploy the IT Service Management Connector (ITSM).
- D. Deploy a function app.

Correct Answer: C

The IT Service Management Connector (ITSMC) allows you to connect Azure and a supported IT Service Management (ITSM) product/service, such as the Microsoft System Center Service Manager.

With ITSMC, you can create work items in ITSM tool, based on your Azure alerts (metric alerts, Activity Log alerts and Log Analytics alerts).

QUESTION 4

You have a computer named Computer1 that has a point-to-site VPN connection to an Azure virtual network named VNet1. The point-to-site connection uses a self-signed certificate. From Azure, you download and install the VPN client configuration package on a computer named Computer2.

You need to ensure that you can establish a point-to-site VPN connection to VNet1 from Computer2. Solution: You modify the Azure Active Directory (Azure AD) authentication policies.

Does this meet this goal?

- A. Yes
- B. No

Correct Answer: B

QUESTION 5

You have an on-premises data center and an Azure subscription. The data center contains two VPN devices. The

subscription contains an Azure virtual network named VNet1. VNet1 contains a gateway subnet.

You need to create a site-to-site VPN. The solution must ensure that if a single instance of an Azure VPN gateway fails, or a single on-premises VPN device fails, the failure will not cause an interruption that is longer than two minutes.

What is the minimum number of public IP addresses, virtual network gateways, and local network gateways required in Azure? To answer, select the appropriate options in the answer area;

NOTE: Each correct selection is worth one point.

Hot Area:

Public IP addresses:

Virtual network gateways:

Local network gateways:

Correct Answer:

Public IP addresses:

Virtual network gateways:

Local network gateways:

Box 1: 4

Two public IP addresses in the on-premises data center, and two public IP addresses in the VNET. The most reliable option is to combine the active-active gateways on both your network and Azure, as shown in the diagram below.

Box 2: 2 Every Azure VPN gateway consists of two instances in an active-standby configuration. For any planned maintenance or unplanned disruption that happens to the active instance, the standby instance would take over (failover) automatically, and resume the S2S VPN or VNet-to-VNet connections. Box 3: 2 Dual-redundancy: active-active VPN gateways for both Azure and on-premises networks
