QUESTION 1

Note: The question is included in a number of questions that depicts the identical set-up. However, every question has a distinctive result. Establish if the solution satisfies the requirements.

Your company has a Microsoft SQL Server Always On availability group configured on their Azure virtual machines (VMs).

You need to configure an Azure internal load balancer as a listener for the availability group.

Solution: You create an HTTP health probe on port 1433.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

Reference:

<https://docs.microsoft.com/en-us/azure/virtual-machines/windows/sql/virtual-machines-windows-portal-sql-alwayson-int-listener>

QUESTION 2

HOTSPOT

You have an Azure subscription that contains an Azure Storage account.

You plan to copy an on-premises virtual machine image to a container named vmimages.

You need to create the container for the planned image.

Which command should you run? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

azcopy

	▼
make	
sync	
copy	

'https://mystorageaccount.

	▼
blob	
dfs	
queue	
table	
images	
file	

.core.windows.net/vmimages'

Correct Answer:

azcopy

	▼
make	
sync	
copy	

'https://mystorageaccount.

	▼
blob	
dfs	
queue	
table	
images	
file	

.core.windows.net/vmimages'

Box 1: make

Here the purpose is to \"create a container\". So the correct command would be azcopy make.

Box 2: blob

The requirement is for storing that image, it's not used to build AKS. So blob is correct option.

**QUESTION 3**

You have an Azure AD tenant named adatum.com that contains the groups shown in the following table.

Name	Type	Member of
Group1	Security	None
Group2	Security	Group1

Adatum.com contains the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2

You assign an Azure Active Directory Premium P2 license to Group1 as shown in the following exhibit.

Assign license ...

Got feedback?

On

Microsoft Defender for Cloud Apps Discovery

Off

On

Group2 is NOT directly assigned a license.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point

Hot Area:

Statements

You can assign User1 the Microsoft Defender for Cloud Apps Discovery license.

Yes

☐

No

☐

You can remove the Azure Active Directory Premium P2 license from User1.

☐☐

User2 is assigned the Azure Active Directory Premium P2.

☐☐

Correct Answer:

**Statements**

You can assign User1 the Microsoft Defender for Cloud Apps Discovery license.

Yes☐**No**☒

You can remove the Azure Active Directory Premium P2 license from User1.

☐☒

User2 is assigned the Azure Active Directory Premium P2.

☐☒

QUESTION 4

Note: This question is part of a series of questions that present the same scenario goals. Some question sets might have more than one correct solution, while others

ion in the series contains a unique solution that might meet the stated not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure web app named App1. App1 runs in an Azure App Service plan named Plan1. Plan1 is associated to the Free pricing tier.

You discover that App1 stops each day after running continuously for 60 minutes.

You need to ensure that App1 can run continuously for the entire day.

Solution: You add a triggered WebJob to App1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

You need to change to Basic pricing Tier.

Note: The Free Tier provides 60 CPU minutes / day. This explains why App1 is stops. The Basic tier has no such cap.

QUESTION 5

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains

a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Region
RG1	Resource group	West US
RG2	Resource group	East Asia
storage1	Storage account	West US
storage2	Storage account	East Asia
VM1	Virtual machine	West US
VNET1	Virtual network	West US
VNET2	Virtual network	East Asia

VM1 connects to VNET1.

You need to connect VM1 to VNET2.

Solution: You delete VM1. You recreate VM1, and then you create a new network interface for VM1.

Does this meet the goal?

A. Yes

B. No

Correct Answer: A

Instead you should delete VM1. You recreate VM1, and then you add the network interface for VM1. Note: When you create an Azure virtual machine (VM), you must create a virtual network (VNet) or use an existing VNet. You can change

the subnet a VM is connected to after it's created, but you cannot change the VNet.
