## QUESTION 1

### HOTSPOT

You plan to create a new Azure Active Directory (Azure AD) role. You need to ensure that the new role can view all the resources in the Azure subscription and issue support requests to Microsoft. The solution must use the principle of least privilege. How should you complete the JSON definition? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

```
{
  "Name": "Role1"
  "IsCustom": true,
  "Description": "Subscription reader and support request and support request creator.",
  "Actions": [
    [
      "*/*",
      "*/read",
      "read/*"
    ],
    [
      "*/Microsoft.Support",
      "Microsoft.Support/*"
    ]
  ],
  "NotActions": [
  ],
  "AssignableScopes": [
    "/subscriptions/11111111-1111-1111-1111-111111111111"
  ]
}
```

Correct Answer:

```
{
  "Name": "Role1",
  "IsCustom": true,
  "Description": "Subscription reader and support request and support request creator.",
  "Actions": [
    {
      "Action": "*"
    },
    {
      "Action": "*/read"
    },
    {
      "Action": "read/*"
    }
  ],
  "NotActions": [
  ],
  "AssignableScopes": [
    "/subscriptions/11111111-1111-1111-1111-111111111111"
  ]
}
```

Box 1: "\*/read",

\*/read lets you view everything, but not make any changes.

Box 2: " Microsoft.Support/\*"

The action Microsoft.Support/\* enables creating and management of support tickets.

## QUESTION 2

You are the global administrator for an Azure Active Directory (Azure AD) tenet named adatum.com. You need to enable two-step verification for Azure users. What should you do?

- A. Create a sign-in risk policy in Azure AD Identity Protection
- B. Enable Azure AD Privileged Identity Management.
- C. Create and configure the Identity Hub.
- D. Configure a security policy in Azure Security Center.

Correct Answer: A

Identity Protection analyzes signals from each sign-in, both real-time and offline, and calculates a risk score based on the probability that the sign-in wasn't performed by the user. Administrators can make a decision based on this risk score signal to enforce organizational requirements. Administrators can choose to block access, allow access, or allow

access but require multi-factor authentication. If risk is detected, users can perform multi-factor authentication to self-remediate and close the risky sign-in event to prevent unnecessary noise for administrators. With Azure Active Directory Identity Protection, you can:

1.  
require users to register for multi-factor authentication
2.  
handle risky sign-ins and compromised users

### QUESTION 3

You have an Azure subscription that contains the resources in the following table.

Name	Type	Azure region	Resource group
VNet1	Virtual network	West US	RG2
VNet2	Virtual network	West US	RG1
VNet3	Virtual network	East US	RG1
NSG1	Network security group (NSG)	East US	RG2

To which subnets can you apply NSG1?

- A. the subnets on VNet1 only
- B. the subnets on VNet2 only
- C. the subnets on VNet3 only
- D. the subnets on VNet2, VNet2, and VNet3
- E. the subnets on VNet2 and VNet3 only

Correct Answer: C

All Azure resources are created in an Azure region and subscription. A resource can only be created in a virtual network that exists in the same region and subscription as the resource.

<https://docs.microsoft.com/en-us/azure/virtual-network/virtual-network-vnet-plan-design-arm>

### QUESTION 4

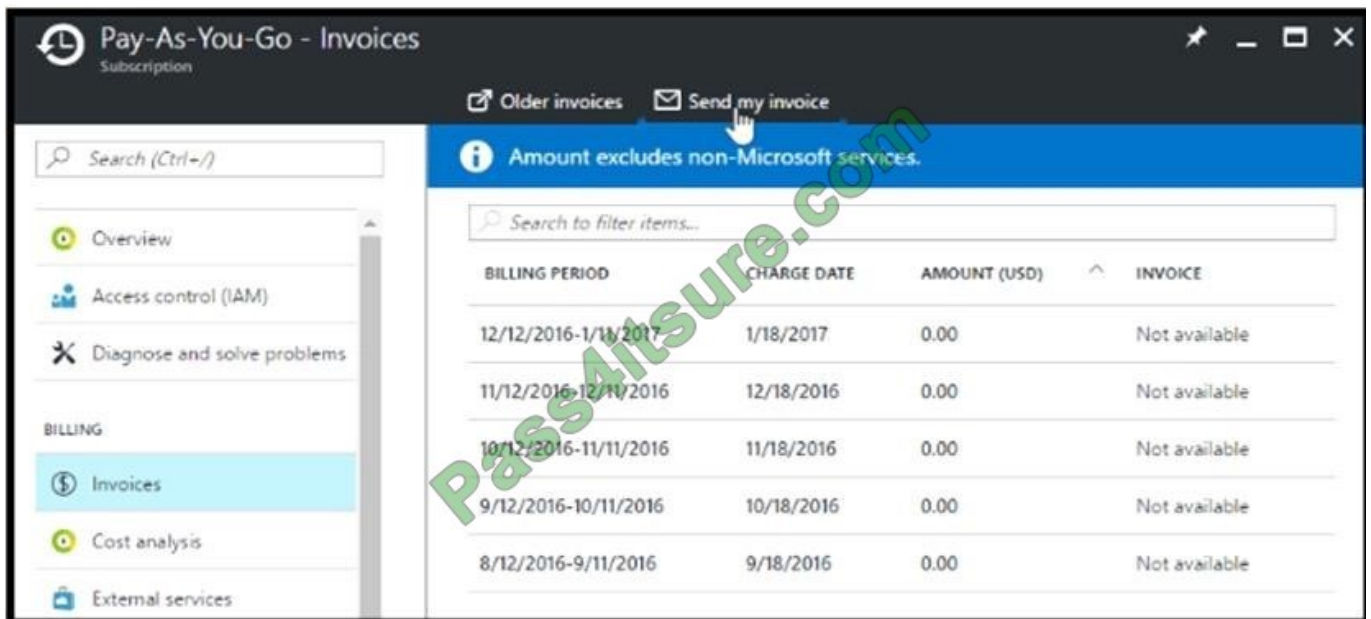

Which blade should you instruct the finance department auditors to use?

- A. Partner information
- B. Overview
- C. Payment methods
- D. Invoices

Correct Answer: D

You can opt in and configure additional recipients to receive your Azure invoice in an email. This feature may not be available for certain subscriptions such as support offers, Enterprise Agreements, or Azure in Open.

Click Opt in and accept the terms.

Scenario: During the testing phase, auditors in the finance department must be able to review all Azure costs from the past week.

## QUESTION 5

You have an Azure subscription that contains the resources shown in the following table.

Name	Type	Region
RG1	Resource group	West US
RG2	Resource group	East Asia
storage1	Storage account	West US
storage2	Storage account	East Asia
VM1	Virtual machine	West US
VNET1	Virtual network	West US
VNET2	Virtual network	East Asia

VM1 connects to VNET1.

You need to connect VM1 to VNET2.

Solution: You turn off VM1, and then you add a new network interface to VM1. Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Instead you should delete VM1. You recreate VM1, and then you add the network interface for VM1. Note: When you create an Azure virtual machine (VM), you must create a virtual network (VNet) or use an existing VNet. You can change

the subnet a VM is connected to after it's created, but you cannot change the VNet.
