**QUESTION 1****HOTSPOT**

You need to deploy two Azure web apps named WebApp1 and WebApp2. The web apps have the following requirements:

1.

WebApp1 must be able to use staging slots

2.

WebApp2 must be able to access the resources located on an Azure virtual network

What is the least costly plan that you can use to deploy each web app? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Hot Area:

WebApp1:

	▼
D1-Dev/Test	
F1-Dev/Test	
I1- Production	
P3 - Production	
S1 - Production	

WebApp2:

	▼
D1-Dev/Test	
F1-Dev/Test	
I1- Production	
P3 - Production	
S1 - Production	

Correct Answer:

WebApp1:

	▼
D1-Dev/Test	
F1-Dev/Test	
I1- Production	
P3 - Production	
S1 - Production	

WebApp2:

	▼
D1-Dev/Test	
F1-Dev/Test	
I1- Production	
P3 - Production	
S1 - Production

QUESTION 2

HOTSPOT

You have the Azure virtual machines shown in the following table.

Name	IP address	Virtual network
VM1	10.0.0.4	VNET1
VM2	172.16.0.4	VNET2
VM3	192.168.0.4	VNET3
VM4	192.168.0.5	VNET3

VNET1, VNET2, and VNET3 are peered.

VM4 has a DNS server that is authoritative for a zone named Contoso.com and contains the records shown in the following table.

Name	Type	Value
Server1	A	131.107.2.3
Server2	A	131.107.2.4

VNET1 and VNET2 are linked to an Azure private DNS zone named Contoso.com that contains the records shown in the following table.

Name	Type	Value
Server1	A	131.107.3.3
Server2	A	131.107.3.4

The virtual networks are configured to use the DNS servers shown in the following table.

Virtual network	DNS server
VNET1	Default (Azure-provided)
VNET2	Custom: 192.168.0.5
VNET3	Custom: 192.168.0.5

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Hot Area:

Statements	Yes	No
From VM1, server1.contoso.com resolves to 131.107.3.3.	<input type="radio"/>	<input type="radio"/>
From VM2, server1.contoso.com resolves to 131.107.3.3.	<input type="radio"/>	<input type="radio"/>
From VM3, server2.contoso.com resolves to 131.107.2.4.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Statements	Yes	No
From VM1, server1.contoso.com resolves to 131.107.3.3.	<input checked="" type="radio"/>	<input type="radio"/>
From VM2, server1.contoso.com resolves to 131.107.3.3.	<input checked="" type="radio"/>	<input type="radio"/>
From VM3, server2.contoso.com resolves to 131.107.2.4.	<input type="radio"/>	<input checked="" type="radio"/>

QUESTION 3

HOTSPOT

You have an Azure subscription that contains the storage accounts shown in the following table.

Name	Kind	Redundancy
storage1	StorageV2	Geo-zone-redundant storage (GZRS)
storage2	BlobStorage	Read-access geo-redundant storage (RA-GRS)
storage3	BlockBlobStorage	Zone-redundant storage (ZRS)

You need to identify which storage accounts support lifecycle management, and which storage accounts support moving data to the Archive access tier.

Which storage accounts should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Lifecycle management:

storage1 only

storage2 only

storage1 and storage3 only

storage2 and storage3 only

storage1, storage2, and storage3

The Archive access tier:

storage1 only

storage2 only

storage1 and storage3 only

storage2 and storage3 only

storage1, storage2, and storage3

Correct Answer:

Answer Area

Lifecycle management:

▼
storage1 only
storage2 only
storage1 and storage3 only
storage2 and storage3 only
storage1, storage2, and storage3

The Archive access tier:

▼
storage1 only
storage2 only
storage1 and storage3 only
storage2 and storage3 only
storage1, storage2, and storage3

Box 1: storage1, storage2, and storage3

Azure Storage lifecycle management offers a rule-based policy that you can use to transition blob data to the appropriate access tiers or to expire data at the end of the data lifecycle.

Lifecycle management policies are supported for block blobs and append blobs in general-purpose v2, premium block blob, and Blob Storage accounts.

Box 2: storage2

The Archive tier for Blob Storage is currently supported for LRS, GRS, and RA-GRS accounts.

Incorrect:

* not storage1, not storage3

The Archive tier for Blob Storage isn't currently supported for ZRS, GZRS, or RA-GZRS accounts.

QUESTION 4

HOTSPOT

You have an Azure subscription that contains the resource groups shown in the following table.

Name	Location
RG1	West US
RG2	East US

RG1 contains the resources shown in the following table.

Name	Type	Location
storage1	Storage account	West US
VNet1	Virtual network	West US
NIC1	Network interface	West US
Disk1	Disk	West US
VM1	Virtual machine	West US

VM1 is running and connects to NIC1 and Disk1. NIC1 connects to VNET1.

RG2 contains a public IP address named IP2 that is in the East US location. IP2 is not assigned to a virtual machine.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Statements	Yes	No
You can move storage1 to RG2.	<input type="radio"/>	<input type="radio"/>
You can move NIC1 to RG2.	<input type="radio"/>	<input type="radio"/>
If you move IP2 to RG1, the location of IP2 will change.	<input type="radio"/>	<input type="radio"/>

Correct Answer:

Answer Area

Statements	Yes	No
You can move storage1 to RG2.	<input checked="" type="radio"/>	<input type="radio"/>
You can move NIC1 to RG2.	<input type="radio"/>	<input checked="" type="radio"/>
If you move IP2 to RG1, the location of IP2 will change.	<input type="radio"/>	<input checked="" type="radio"/>

Box 1: Yes

You can move storage

Box 2: No

You can't move to a new resource group a NIC that is attached to a virtual machine.

Box 3: No

Azure Public IPs are region specific and can't be moved from one region to another.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-resource-manager/management/move-support-resources>

<https://docs.microsoft.com/en-us/azure/virtual-network/move-across-regions-publicip-powershell>

QUESTION 5

You have an Azure subscription that contains the following storage account:

Name	Kind	Replication	Access tier	Advanced threat protection	Lock
storage1	StorageV2	Read access geo-redundant storage (RA-GRS)	Cool	On	Delete

You need to create a request to Microsoft Support to perform a live migration of storage1 to Zone Redundant Storage (ZRS) replication. How should you modify storage1 before the Live migration?

- A. Set the replication to Locally-redundant storage (LRS)
- B. Disable Advanced threat protection
- C. Remove the lock
- D. Set the access tier to Hot

Correct Answer: A

If you want to live migration from RA-GRS to ZRS, at first you have to Switch the storage tier to LRS and then only you can request a live migration.

Switching	...to LRS	...to GRS/RA-GRS	...to ZRS	...to GZRS/RA-GZRS
...from LRS	N/A	Use Azure portal, PowerShell, or CLI to change the replication setting ¹	Perform a manual migration Request a live migration	Perform a manual migration OR Switch to GRS/RA-GRS first and then request a live migration ¹
...from GRS/RA-GRS	Use Azure portal, PowerShell, or CLI to change the replication setting	N/A	Perform a manual migration OR Switch to LRS first and then request a live migration	Perform a manual migration Request a live migration
