-  **800,000+** Satisfied Customers

## QUESTION 1

### HOT SPOT

You have an Azure Batch project that processes and converts files and stores the files in Azure storage. You are developing a function to start the batch job.

You add the following parameters to the function:

Parameter name	Description
fileTasks	a list of tasks to be run
jobId	the identifier that must be assigned to the job
outputContainerSasUrl	a storage SAS URL to store successfully converted files
failedContainerSasUrl	a storage SAS URL to store copies of files that failed to convert.

You must ensure that converted files are placed in the container referenced by the outputContainerSasUrl parameter. Files which fail to convert are placed in the container referenced by the failedContainerSasUrt parameter.

You need to ensure the files are correctly processed.

How should you complete the code segment? To answer, select the appropriate options in the answer area;

Hot Area:

```
public List<CloudTask> StartTasks(List<FileTask> fileTasks, string jobId,
string outputContainerSasUrl, string failedContainerSasUrl)
{
    BatchSharedKeyCredentials sharedKeyCredentials =
    new BatchSharedKeyCredentials(batchAccountUrl, batchAccountName, batchAccountKey);
    List<CloudTask> tasks = new List<CloudTask>();
    using (BatchClient batchClient = BatchClient.Open(sharedKeyCredentials))
    {
        CloudJob job = batchClient.JobOperations.
        job.Id = jobId;
        job.PoolInformation = new PoolInformation(poolId);
        job.Commit();
        fileTasks.ForEach((fileTask) =>
        {
            string taskId = $"Task{DateTime.Now.ToFileTimeUtc().ToString()}";
            CloudTask task = new CloudTask(taskId, fileTask.Command);
            List<OutputFile> outputFileList = new List<OutputFile>();
            OutputFileBlobContainerDestination outputContainer =
            new OutputFileBlobContainerDestination(outputContainerSasUrl);
            OutputFileBlobContainerDestination failedContainer =
            new OutputFileBlobContainerDestination(failedContainerSasUrl);
            outputFileList.Add(new OutputFile(fileTask.Output,
            new FileDestination(outputContainer),
            new OutputFileUploadOptions(OutputFileUploadCondition.
            outputFileList.Add(new OutputFile(fileTask.Output,
            new OutputFileDestination(failedContainer),
            new OutputFileUploadOptions(OutputFileUploadCondition.
            task.
            tasks.Add(
        });
    }
    return tasks;
}
```

www.Pass4itsure.com

Dropdown menu with options: GetJob, GetTask, EnableJob, CreateJob

Dropdown menu with options: TaskFailure, TaskSuccess, TaskCompletion

Dropdown menu with options: TaskSuccess, TaskFailure, TaskCompletion

These are the selection

Correct Answer:

```

public List<CloudTask> StartTasks(List<FileTask> fileTasks, string jobId,
string outputContainerSasUrl, string failedContainerSasUrl)
{
    BatchSharedKeyCredentials sharedKeyCredentials =
    new BatchSharedKeyCredentials(batchAccountUrl, batchAccountName, batchAccountKey);
    List<CloudTask> tasks = new List<CloudTask>();
    using (BatchClient batchClient = BatchClient.Open(sharedKeyCredentials))
    {
        CloudJob job = batchClient.JobOperations.
        job.Id = jobId;
        job.PoolInformation = new PoolInformation(poolId);
        job.Commit();
        fileTasks.ForEach((fileTask) =>
        {
            string taskId = $"Task{DateTime.Now.ToFileTimeUtc().ToString()}";
            CloudTask task = new CloudTask(taskId, fileTask);
            IList<OutputFile> outputFileList = new List<OutputFile>();
            OutputFileBlobContainerDestination outputContainer =
            new OutputFileBlobContainerDestination(outputContainerSasUrl);
            OutputFileBlobContainerDestination failedContainer =
            new OutputFileBlobContainerDestination(failedContainerSasUrl);
            outputFileList.Add(new OutputFile(fileTask.Output,
            new FileDestination(outputContainer),
            new OutputFileUploadOptions(OutputFileUploadCondition.
            outputFileList.Add(new OutputFile(fileTask.Output,
            new OutputFileDestination(failedContainer),
            new OutputFileUploadOptions(OutputFileUploadCondition.
            task.
            tasks.Add(
        });
    }
    return tasks;
}

```

EnableJob TaskFailure TaskCompletionResourceFiles

**QUESTION 2**

You develop a solution that uses an Azure SQL Database to store user information for a mobile app.

The app stores sensitive information about users.

You need to hide sensitive information from developers that query the data for the mobile app.

Which three items must you identify when configuring dynamic data masking? Each correct answer presents a part of the solution.

NOTE: Each correct selection is worth one point.

- A. Column
- B. Table
- C. Trigger
- D. Schema
- E. Index

Correct Answer: BCD

---

### QUESTION 3

You need to troubleshoot the order workflow.

What should you do? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Review the run history.
- B. Review the trigger history.
- C. Review the API connections.
- D. Review the activity log.

Correct Answer: BC

---

### QUESTION 4

You are developing an ASP.NET web application that you will deploy to Azure.

The solution must meet the following requirements:

Store user session state by using only serializable data types.

Provide customizable caching of session data;

Support scaling out the number of web hosts.

?Maximize performance.

Which solution meets these requirements?

- A. Clustered Azure Redis Cache
- B. SQL Server session state provider
- C. in memory session state provider

D. ASP .NET Output Cache provider for Azure Redis Cache

Correct Answer: B

### QUESTION 5

#### HOT SPOT

You need to ensure that security requirements are met.

What value should be used for the `ConnectionString` field on line DB03 in the Database class? To answer, select the appropriate answer area;

NOTE: Each correct selection is worth one point.

Hot Area:

"Data Source=datastore.database.windows.net; Initial Catalog=experise;

Integrated Security=SSPI
Trusted_Connection=False
Network Library=DBMSSOCN
MultipleActiveResultSets=True

Encrypt=True
Integrated Security=True
Follower Partner=False
Named Poise=True

Correct Answer:

"Data Source=datastore.database.windows.net; Initial Catalog=experise;

Integrated Security=SSPI
Trusted_Connection=False
Network Library=DBMSSOCN
MultipleActiveResultSets=True

Encrypt=True
Integrated Security=True
Follower Partner=False
Named Poise=True
