QUESTION 1

HOT SPOT

You develop a news and blog content delivery app for Windows devices.

A notification must arrive on a user's device when there is a new article available for them to view.

You need to implement push notifications.

How should you complete the code segment? To answer, select the appropriate options in the answer area;

NOTE: Each connect selection is worth one point.

Hot Area:

```
string notificationHubName = "contoso_hub";  
string notificationHubConnection = "connection_string";
```

hub +

NotificationHubClient	GetInstallation
NotificationHubClientSettings	CreateClientFromConnectionString
NotificationHubJob	RegisterOnUpdateInstallation
NotificationDetails	UnregisterInstallation

NotificationHubClient

NotificationHubClient
NotificationHubClientSettings
NotificationHubJob
NotificationDetails

```
(notificationHubConnection, notificationHubName);  
string windowsToastPayload =  
$"<toast><visual><binding template=""toastText01""><text id=""1""> +
```

Correct Answer:

```
string notificationHubName = "contoso_hub";  
string notificationHubConnection = "connection_string";
```

hub +

NotificationHubClient	GetInstallation
NotificationHubClientSettings	CreateClientFromConnectionString
NotificationHubJob	RegisterOnUpdateInstallation
NotificationDetails	UnregisterInstallation

NotificationHubClient

NotificationHubClient
NotificationHubClientSettings
NotificationHubJob
NotificationDetails

```
(notificationHubConnection, notificationHubName);  
string windowsToastPayload =  
$"<toast><visual><binding template=""toastText01""><text id=""1""> +
```

```
string notificationHubName = "contoso_hub";
string notificationHubConnection = "connection_string";

NotificationHubClient
NotificationHubClientSettings
NotificationHubJob
NotificationDetails

NotificationHubClient
NotificationHubClientSettings
NotificationHubJob
NotificationDetails

(notificationHubConnection, notificationHubName);
string windowsToastPayload =
@"<toast><visual><binding template=""ToastText01""><text id=""1""> +
```

QUESTION 2

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You connect to Azure by using a workstation that has a slow internet connection. You have two Azure file shares. You plan to transfer a series of large files from another container. The workstation does not have sufficient disk space to store

the files.

You define the following variables in Azure PowerShell:

Variable	Description
\$sourceServer	This variable represents the container that stores the files.
\$destServer	This variable represents the container where files will be copied.
\$sourceKey	This variable represents the primary key of the source storage account.
\$destKey	This variable represents the primary key of the destination storage account.

You need to simultaneously transfer the large files as efficiently as possible.

Solution: Write a C# application that implements the Azure Storage API method CloudFile.StartCopy to transfer files to the destination container.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 3

You need to meet the LabelMaker application security requirement

Solution: Place the Azure Active Directory account into an Azure AD group. Create a ClusterRoleBinding and assign it to the group.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 4

DRAG DROP

A company backs up all manufacturing data to Azure Blob Storage. Admins move blobs from hot storage to archive tier storage every month.

You must automatically move blobs to Archive tier after they have not been accessed for 180 days.

The path for any item that is not archived must be placed in an existing queue.

This operation must be performed automatically once a month. You set the value of TierAgeInDays to 180.

How should you configure the Logic App? To answer, drag the appropriate triggers or action blocks to the correct trigger or action slots. Each trigger or action block may be used once, more than once, or not at all. You may need to drag the

split bar between panes or scroll to view content

NOTE: Each correct selection is worth one point.

Select and Place:

Triggers and Action Blocks

Insert Entity
*Table: processing
*Entity: Path

Tier blob
If blob is older than the defined value, tier it to Cool or Archive tier
*Blob path: Path
*Blob Tier: Archive

When there are messages in a queue
*Queue Name: processing
Connected to tableStorageAccountConnection.

Recurrence
*Interval: 1
*Frequency: Month

Answer Area

Set tier age variable

For each

Scan all blobs in this folder

When there are messages in a queue

Queue Name: processing

If true

If false

Add an action

Correct Answer:

Triggers and Action Blocks

Insert Entity

*Table: processing

*Entity: Path

Show advanced options

Tier blob

If blob is older than the defined value, tier it to Cool or Archive tier

*Blob path: Path

*Blob Tier: Archive

When there are messages in a queue

*Queue Name: processing

Connected to tableStorageAccountConnection. Change connection.

Recurrence

*Interval: 1

*Frequency: Month

Show advanced options

Answer Area

Recurrence

*Interval: 1

*Frequency: Month

Show advanced options

Set tier age variable

Set tier age variable

For each

Scan all blobs in this folder

*Select an output from previous steps: value

When there are messages in a queue

*Queue Name: processing

Connected to tableStorageAccountConnection. Change connection.

if true

Recurrence

*Interval: 1

*Frequency: Month

Show advanced options

if false

When there are messages in a queue

*Queue Name: processing

Connected to tableStorageAccountConnection. Change connection.
