QUESTION 1

You develop a website. You plan to host the website in Azure. You expect the website to experience high traffic volumes after it is published. You must ensure that the website remains available and responsive while minimizing cost. You need to deploy the website. What should you do?

- A. Deploy the website to an App Service that uses the Shared service tier. Configure the App Service plan to automatically scale when the CPU load is high.
- B. Deploy the website to a virtual machine. Configure the virtual machine to automatically scale when the CPU load is high.
- C. Deploy the website to an App Service that uses the Standard service tier. Configure the App Service plan to automatically scale when the CPU load is high.
- D. Deploy the website to a virtual machine. Configure a Scale Set to increase the virtual machine instance count when the CPU load

Correct Answer: C

QUESTION 2

A company is implementing a publish- subscribe (Pub/Sub) messaging component by using Azure Service Bus. You are developing the first subscription application.

In the Azure portal you see that messages are being sent to the subscription for each topic. You create a subscription client object by supplying the correct details, but the subscription application is still not consuming the messages.

You need to complete the source code of the subscription client.

What should you do?

- A.

```
subscriptionClient = new SubscriptionClient(ServiceBusConnectionString, TopicName, SubscriptionName);
```
- B.

```
await subscriptionClient.AddRuleAsync(new RuleDescription(RuleDescription.DefaultRuleName, new TrueFilter()));
```
- C.

```
await subscriptionClient.CloseAsync();
```

A. B. C.

```
subscriptionClient.RegisterMessageHandler(ProcessMessageAsync, messageHandlerOptions);
```

D.

Correct Answer: A

QUESTION 3

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You use ASP.NET Core MVC with ADO.NET to develop an application. You implement database sharding for the application by using Azure SQL Database. You establish communication links between the sharded databases.

You need to implement a strategy that allows a group of operations that are performed on multiple Azure databases to be rolled back on all databases if any of the operations fail.

Solution:

In the .NET method, define a new transaction in a using block.

Within the using block, establish connections to each Azure SQL Database instance.

Run the SQL operations on each connection. If no exception occurs, commit the transaction.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

QUESTION 4

HOTSPOT

You are creating a bot for a company by using QnA Maker.

You need to ensure that the company can update the bot without third party assistance. What should you use? To answer, select the appropriate options in the answer area;

NOTE: Each correct selection is worth one point.

Hot Area:

Scenario
Add customer question/answer content.
Use an Azure Application Insights resource for analytics.
Update and train a knowledge base.

Correct Answer:

QUESTION 5

DRAG DROP

You are developing an online order website that uses Azure Durable Functions- You develop the following processes for the website:

Process	Requirements
Add items to the shopping cart.	<ul style="list-style-type: none"> Check inventory to see if an item is in stock. If the item is in stock, add the item to the cart. If the item is not in stock, display a message to the user.
Delete items from the shopping cart.	<ul style="list-style-type: none"> If the item count is greater than zero, display a warning message to the user. If the user selects the continue option, decrease the item count in the cart and refresh the display of the cart. If the user selects the cancel operation, display the cart. If the item count is zero, remove the item from the cart.
Complete checkout processes.	<ul style="list-style-type: none"> Confirm order information, including quantities and shipment method. Collect billing information. Collect shipping information. Finalize the purchase.

You need to identify what types of functions to use for each step of the process.

Which function types should you use? To answer, drag the appropriate function types to the correct operations. Each function type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to

view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Correct Answer:

Function types

- Activity
- Orchestrator
- Client

Answer Area

Operation

- The system checks inventory to determine if the item is in stock.
- The system adds the item to the cart if the item is in stock.
- The user clicks the checkout button.
- The system collects billing information and completes the checkout process.

Function type

- Activity
- Client
- Orchestrator
- Activity
