**QUESTION 1**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to ensure that authentication events are triggered and processed according to the policy.

Solution: Ensure that sign out events have a subject prefix. Create an Azure Event Grid subscription that uses the subject Begins With filter.

Does the solution meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 2

You need to update the chatbot to greet the user when they sign in.

Which two rich card formats can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. Thumbnail
- B. Adaptive
- C. Sign-in
- D. Animation
- E. Hero

Correct Answer: BE

QUESTION 3

Your company's Internet Information Services (IIS) web server for Windows Server hosts legacy ASP.NET web apps. The applications do not use the Application Insights SDK or APIs.

You install Application Insights on the Windows server running IIS. You must use the Application Insights SDK to monitor the legacy web apps. You need to collect information about the legacy web apps. Which data class can you monitor?

- A. Dependencies
- B. Session

C. Stack Dump

D. Client Context

Correct Answer: A

QUESTION 4

You host an on-premises ASP.NET Web API at the company headquarters. The Web API is consumed by application running at the company's branch offices using the Azure Relay service. All the users of the applications are on the same

Azure Active Directory (Azure AD).

You need to ensure that the application can consume the Web API.

What should you do?

A. Create separate Azure AD groups named Senders and Receivers. In Access Control (IAM) for the Relay namespace, assign Senders the Reader role and assign Receivers the Reader role.

B. Create dedicated Azure AD identities named Sender and Receiver. Assign Sender the Azure AD Identity Reader role. Assign Receiver the Azure AD Identity Reader role. Configure applications to use the respective identities.

C. Create a Shared Access policy for the namespace. Use a connection string in Web API and use a different connection string in consumer applications.

D. Create a Shared Access policy for Send permissions and another for Receive permissions.

Correct Answer: A

QUESTION 5

HOTSPOT

You are developing an Azure Function that will be triggered using a webhook from an external application. The Azure Function will receive JSON data in the body of the request.

Calling applications send an account ID as part of the URL. The number at the end of the URL is an integer. The format for the URL resembles the following: `/api/account/1`

The Azure Function must accept all incoming requests without requiring keys or tokens.

You need to complete the attributes for the Azure Function.

How should you complete the code? To answer, select the appropriate options in the answer area;

NOTE: Each correct selection is worth one point.
