-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution. Determine whether the solution meets the stated goals.

You need to meet the LabelMaker application security requirement.

Solution: Create a Microsoft Azure Active Directory service principal and assign it to the Azure Kubernetes Service (AKS) cluster.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

---

**QUESTION 2**

DRAG DROP

You develop an ASP.NET Core MVC application. You configure the application to track webpages and custom events.

You need to identify trends in application usage.

Which Azure Application Insights Usage Analysis features should you use? To answer, drag the appropriate features to the correct requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split

bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

### Answer Area

Features	Requirement	Feature
Users	Which pages visited by users most often correlate to a product purchase?	<input type="text"/>
Funnels	How does load time of the product display page affect a user's decision to purchase a product?	<input type="text"/>
Impact	Which events most influence a user's decision to continue to use the application?	<input type="text"/>
Retention		
User Flows	Are there places in the application that users often perform repetitive actions?	<input type="text"/>

Correct Answer:

### Answer Area

Features	Requirement	Feature
<input type="text"/>	Which pages visited by users most often correlate to a product purchase?	Users
Funnels	How does load time of the product display page affect a user's decision to purchase a product?	Impact
<input type="text"/>	Which events most influence a user's decision to continue to use the application?	Retention
<input type="text"/>		
<input type="text"/>	Are there places in the application that users often perform repetitive actions?	User Flows

Box1: Users

Box 2: Impact

One way to think of Impact is as the ultimate tool for settling arguments with someone on your team about how slowness in some aspect of your site is affecting whether users stick around. While users may tolerate a certain amount of

slowness, Impact gives you insight into how best to balance optimization and performance to maximize user conversion.

### Box 3: Retention

The retention feature in Azure Application Insights helps you analyze how many users return to your app, and how often they perform particular tasks or achieve goals. For example, if you run a game site, you could compare the numbers of

users who return to the site after losing a game with the number who return after winning. This knowledge can help you improve both your user experience and your business strategy.

### Box 4: User flows

The User Flows tool visualizes how users navigate between the pages and features of your site. It's great for answering questions like:

How do users navigate away from a page on your site?

What do users click on a page on your site?

Where are the places that users churn most from your site?

Are there places where users repeat the same action over and over?

Incorrect Answers:

Funnel: If your application involves multiple stages, you need to know if most customers are progressing through the entire process, or if they are ending the process at some point. The progression through a series of steps in a web

application is known as a funnel. You can use Azure Application Insights Funnels to gain insights into your users, and monitor step-by-step conversion rates.

---

### QUESTION 3

You need to ensure that authentication events are triggered and processed according to the policy. Solution: Create separate Azure Event Grid topics and subscriptions for sign-in and sign-out events. Does the solution meet the goal?

A. Yes

B. No

Correct Answer: A

---

### QUESTION 4

You provide an Azure API Management managed web service to clients. The back-end web service implements HTTP Strict Transport Security (HSTS).

Every request to the backend service must include a valid HTTP authorization header.

---

You need to configure the Azure API Management instance with an authentication policy.

Which two policies can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A. OAuth Client Credential Grant
- B. Basic Authentication
- C. Certificate Authentication
- D. Digest Authentication

Correct Answer: AC

### QUESTION 5

#### HOTSPOT

You need to ensure that you can deploy the LabelMaker application.

How should you complete the CLI commands? To answer, select the appropriate options in the answer area;

NOTE: Each correct selection is worth one point.

Hot Area:

```
az  create --name  --location eastus
```

```
az  create --resource-group CohoWineryLabelMaker --name
```

--node-count 5 --enable-addons

Correct Answer:

```
az  create --name  --location eastus
az  create --resource-group CohoWineryLabelMaker --name
LabelMakerCluster --node-count 5 --enable-addons 

```

Box 1: group

Create a resource group with the az group create command. An Azure resource group is a logical group in which Azure resources are deployed and managed.

The following example creates a resource group named myResourceGroup in the westeurope location.

```
az group create --name myResourceGroup --location westeurope
```

Box 2: CohoWinterLabelMaker

Use the resource group named, which is used in the second command.

Box 3: aks

The command az aks create, is used to create a new managed Kubernetes cluster.

Box 4: monitoring

Scenario: LabelMaker app

Azure Monitor Container Health must be used to monitor the performance of workloads that are deployed to Kubernetes environments and hosted on Azure Kubernetes Service (AKS).

You must use Azure Container Registry to publish images that support the AKS deployment.
