-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

You manage a single-domain, on-premises Active Directory for named contoso.com. The forest functional level is window Server 2016.

You have several on-premises applications that depend on Active Directory.

You plan to migrate the applications to Azure.

You need to recommend an identity solution for the application. The solution must meet the following requirements:

Eliminate the need for hybrid network connectivity

Minimize management overhead for Active Directory.

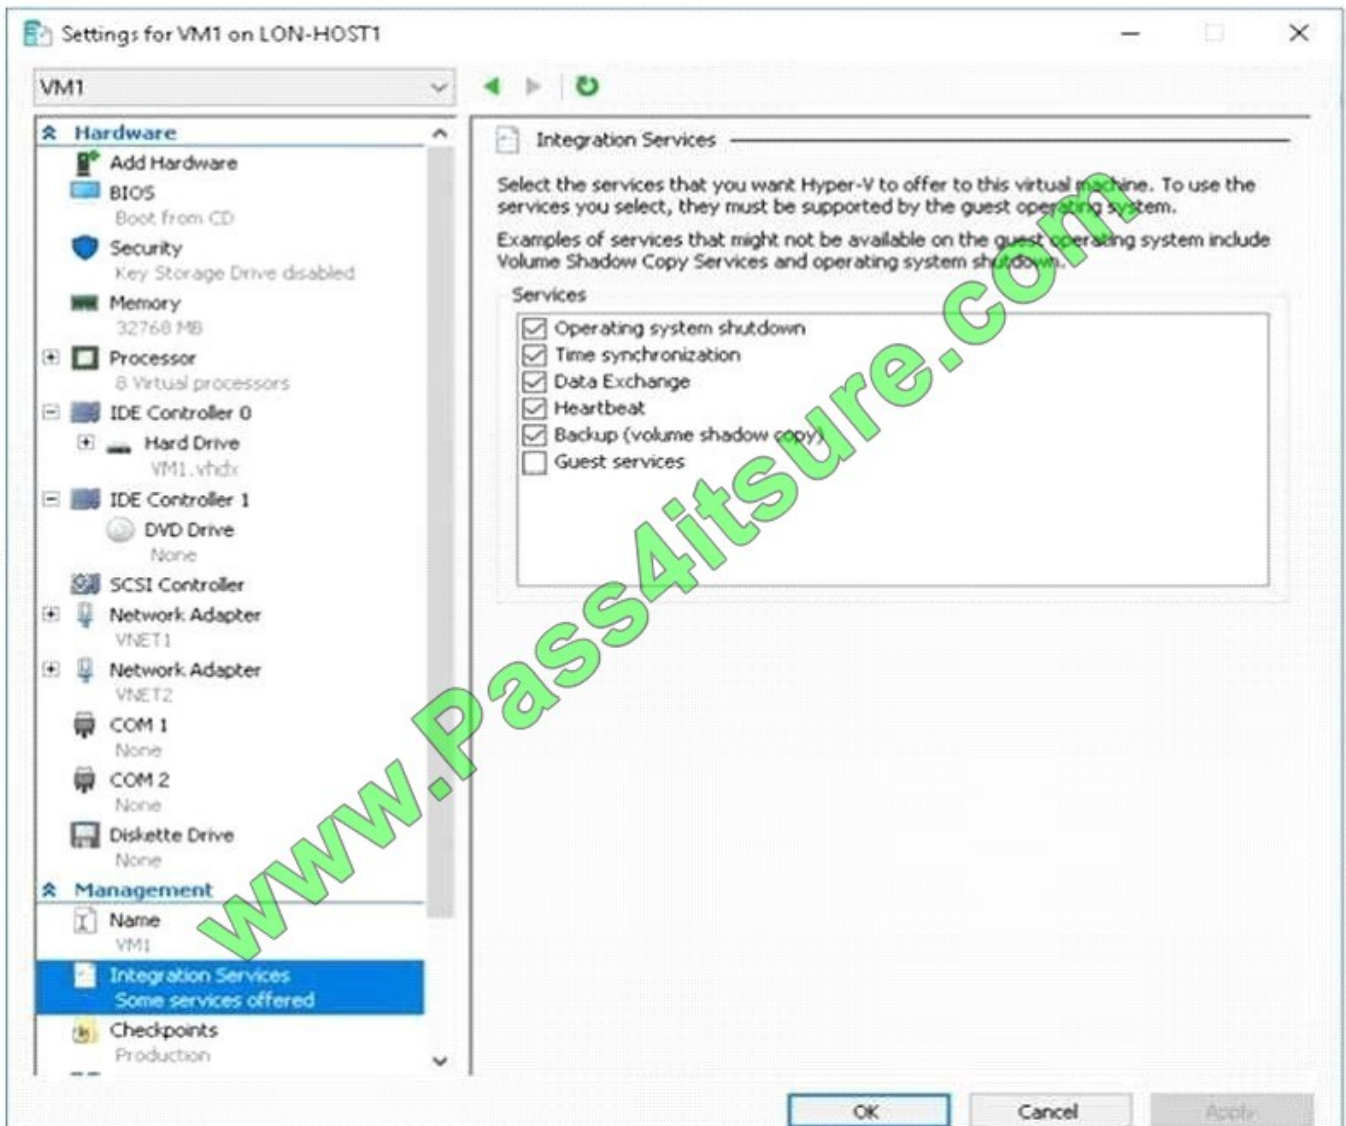

What should you recommend?

- A. In Azure, deploy additional domain controllers for the contoso.com domain
- B. In Azure, deploy an additional child domain to the contoso.com forest.
- C. Implement Azure Active Directory Domain Services (Azure AD DS).
- D. Implement a new Active Directory forest in Azure.

Correct Answer: A

QUESTION 2

You have an on-premises virtual machine named VM1 configured as shown in the following exhibit.

VM is started.

You need to create a new virtual machine image in Azure from VM1. Which three actions should you perform before you create the new image? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Remove the Backup (volume shadow copy) integration service
- B. Generalize VM1
- C. Run Add-AzureRmVhd and specify a blob service container as the destination
- D. Run Add-AzureRmVhd and specify a file share as the destination
- E. Reduce the amount of memory to 16 GB

Correct Answer: ABC

**QUESTION 3**

You discover that VM3 does NOT meet the technical requirements.

You need to verify whether the issue relates to the NSGs.

What should you use?

- A. Diagram in VNet1
- B. Diagnostic settings in Azure Monitor
- C. IP flow verify in Azure Network Watcher
- D. Diagnose and solve problems in Traffic Manager profiles
- E. the security recommendations in Azure Advisor

Correct Answer: C

Scenario: Contoso must meet technical requirements including:

Ensure that VM3 can establish outbound connections over TCP port 8080 to the applications servers in the Montreal office.

IP flow verify checks if a packet is allowed or denied to or from a virtual machine. The information consists of direction, protocol, local IP, remote IP, local port, and remote port. If the packet is denied by a security group, the name of the rule

that denied the packet is returned. While any source or destination IP can be chosen, IP flow verify helps administrators quickly diagnose connectivity issues from or to the internet and from or to the on-premises environment.

QUESTION 4

You plan to deploy a payroll system to Azure. The payroll system will use Azure virtual machines that run SUSE Linux Enterprise Server and Windows.

You need to recommend a business continuity solution for the payroll system. The solution must meet the following requirements:

Minimize costs.

Provide business continuity if an Azure region fails.

Provide a recovery time objective (RTO) of 30 minutes.

Provide a recovery point objective (RPO) of five minutes.

What should you include in the recommendation?

- A. Microsoft System Center Data Protection Manage (DPM)

- B. unmanaged disks that use geo-redundant storage (GRS)
- C. Azure Site Recovery
- D. Azure Backup

Correct Answer: C

QUESTION 5

You create a virtual machine scale set named Scale1. Scale1 is configured as shown in the following exhibit.

The screenshot displays the configuration for a virtual machine scale set. It is divided into two main sections: INSTANCES and AUTOSCALE.

INSTANCES

- Instance count: 4
- Instance size: DS1_v2 (1 vCPU, 3.5 GB)
- Deploy as low priority: No
- Use managed disks: Yes

AUTOSCALE

- Autoscale: Enabled
- Minimum number of VMs: 2
- Maximum number of VMs: 20

Scale out

- CPU threshold (%): 80
- Number of VMs to increase by: 2

Scale in

- CPU threshold (%): 30
- Number of VMs to decrease by: 4

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Hot Area:

If Scale1 is utilized at 85 percent for six minutes, Scale1 will be running **[answer choice]**.

2 virtual machines
4 virtual machines
6 virtual machines
8 virtual machines
10 virtual machines

If Scale1 is first utilized at 25 percent for six minutes, and then utilized at 50 percent for six minutes, Scale1 will be running **[answer choice]**.

2 virtual machines
4 virtual machines
6 virtual machines
8 virtual machines
10 virtual machines

Correct Answer:

If Scale1 is utilized at 85 percent for six minutes, Scale1 will be running **[answer choice]**.

2 virtual machines
4 virtual machines
6 virtual machines
8 virtual machines
10 virtual machines

If Scale1 is first utilized at 25 percent for six minutes, and then utilized at 50 percent for six minutes, Scale1 will be running **[answer choice]**.

2 virtual machines
4 virtual machines
6 virtual machines
8 virtual machines
10 virtual machines

Box 1:

The Autoscale scale out rule increases the number of VMs by 2 if the CPU threshold is 80% or higher. The initial instance count is 4 and rises to 6 when the 2 extra instances of VMs are added.

Box 2:

The Autoscale scale in rule decreases the number of VMs by 4 if the CPU threshold is 30% or lower. The initial instance count is 4 and thus cannot be reduced to 0 as the minimum instances is set to 2. Instances are only added when the

CPU threshold reaches 80%.
