**QUESTION 1**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a hybrid configuration of Azure Active Directory (Azure AD).

You have an Azure HDInsight cluster on a virtual network.

You plan to allow users to authenticate to the cluster by using their on-premises Active Directory credentials.

You need to configure the environment to support the planned authentication.

Solution: You deploy the On-premises data gateway to the on-premises network.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

Instead, you connect HDInsight to your on-premises network by using Azure Virtual Networks and a VPN gateway.

Note: To allow HDInsight and resources in the joined network to communicate by name, you must perform the following actions:

1.

Create Azure Virtual Network.

2.

Create a custom DNS server in the Azure Virtual Network.

3.

Configure the virtual network to use the custom DNS server instead of the default Azure Recursive Resolver.

4.

Configure forwarding between the custom DNS server and your on-premises DNS server.

QUESTION 2

You have an Azure subscription that contains an Azure Container Registry named Registry1. The subscription uses the Standard use tier of Azure Security Center.

You upload several container images to Register1.

You discover that vulnerability security scans were not performed.

You need to ensure that the images are scanned for vulnerabilities when they are uploaded to Registry1.

What should you do?

- A. From the Azure portal modify the Pricing tier settings.
- B. From Azure CLI, lock the container images.
- C. Upload the container images by using AzCopy
- D. Push the container images to Registry1 by using Docker

Correct Answer: A

Reference: <https://charbelnemnom.com/scan-container-images-in-azure-container-registry-with-azure-security-center/>

QUESTION 3

SIMULATION

You need to prevent administrators from performing accidental changes to the Homepage app service plan.

To complete this task, sign in to the Azure portal.

- A. See the below.

Correct Answer: A

You need to configure a 'lock' for the app service plan. A read-only lock ensures that no one can make changes to the app service plan without first deleting the lock.

1.

In the Azure portal, type App Service Plans in the search box, select App Service Plans from the search results then select Homepage. Alternatively, browse to App Service Plans in the left navigation pane.

2.

In the properties of the app service plan, click on Locks.

3.

Click the Add button to add a new lock.

4.

Enter a name in the Lock name field. It doesn't matter what name you provide for the exam.

5.

For the Lock type, select Read-only.

6.

Click OK to save the changes.

QUESTION 4

You have an Azure subscription named Sub1 that contains the Azure key vaults shown in the following table:

Name	Region	Resource group
Vault1	West Europe	RG1
Vault2	East US	RG1
Vault3	West Europe	RG2
Vault4	East US	RG2

In Sub1, you create a virtual machine that has the following configurations:

1.

Name: VM1

2.

Size: DS2v2

3.

Resource group: RG1

4.

Region: West Europe

5.

Operating system: Windows Server 2016

You plan to enable Azure Disk Encryption on VM1.

In which key vaults can you store the encryption key for VM1?

A. Vault1 or Vault3 only

B. Vault1, Vault2, Vault3, or Vault4

C. Vault1 only

D. Vault1 or Vault2 only

Correct Answer: A

In order to make sure the encryption secrets don't cross regional boundaries, Azure Disk Encryption needs the Key Vault and the VMs to be co-located in the same region. Create and use a Key Vault that is in the same region as the VM to be encrypted.

Reference: <https://docs.microsoft.com/en-us/azure/security/azure-security-disk-encryption-prerequisites>

QUESTION 5

You need to deploy Microsoft Antimalware to meet the platform protection requirements. What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.
