**QUESTION 1**

DRAG DROP

You have an Azure Stack Hub integrated system that is disconnected from the Internet.

You need to collect diagnostic logs, but do not have access to an SMB share.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

**Actions**

**Answer Area**

- Run the Unlock-SupportSession cmdlet
- Connect to the privileged endpoint (PEP)
- From the administrator portal, create an Azure Storage account and a file share
- Create a shared access signature (SAS)
- Run the Get-AzureStackLog cmdlet
- From the administrator portal, create an Azure Storage account and a container
- Create an app registration

Correct Answer:

**Actions**

Run the Unlock-SupportSession cmdlet

From the administrator portal, create an Azure Storage account and a file share

Create an app registration

**Answer Area**

From the administrator portal, create an Azure Storage account and a container

Create a shared access signature (SAS)

Connect to the privileged endpoint (PEP)

Run the Get-AzureStackLog cmdlet

Reference: <https://docs.microsoft.com/en-us/azure-stack/operator/azure-stack-get-azurestacklog?view=azs-2008>

**QUESTION 2**

**HOTSPOT**

You have a Windows Server-based certification authority (CA) and a disconnected Azure Stack Hub integrated system.

You need to issue a certificate that will be used to authenticate a service principal when the service principal accesses Azure Stack Hub resources.

How should you configure the certificate? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Cryptographic provider:

Microsoft Enhanced Cryptographic Provider v1.0
Microsoft legacy cryptographic service provider (CSP) key provider
Microsoft Strong Cryptographic Provider

Certificate format:

.p7c
.pem
.pfx

Correct Answer:

Cryptographic provider:

Microsoft Enhanced Cryptographic Provider v1.0
Microsoft legacy cryptographic service provider (CSP) key provider
Microsoft Strong Cryptographic Provider

Certificate format:

.p7c
.pem
.pfx

Box 1: Microsoft legacy Cryptographic Service Provider (CSP) key provider Give an app access to Azure Stack Hub resources An application that deploys or configures resources through Azure Resource Manager must be represented by its own identity, known as a security principal. Just as a user is represented by a user principal, an app is represented by a service principal. Create an app registration that uses a certificate credential When creating a certificate credential, the following requirements must be met:

\*

The cryptographic provider must be specified as a Microsoft legacy Cryptographic Service Provider (CSP) key provider.

\*

The certificate format must be in PFX file, as both the public and private keys are required. Windows servers use .pfx files that contain the public key file (TLS/SSL certificate file) and the associated private key file.

\*

Etc. Box 2: .pfx

### QUESTION 3

#### DRAG DROP

You have an Azure Stack Hub integrated system that is enabled for multi-tenancy and contains a user subscription. The subscription contains a user named User1.

The integrated system has the following configurations:

Region name: region1

Fully qualified domain name (FQDN): contoso.com

You need to identify which gallery endpoint URI User1 must use.

How should you complete the script? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Values	Answer Area
adminmanagement.	\$GalleryEndpoint = (Invoke-WebRequest
adminportal.	-Uri "https:// <input type="text"/> <input type="text"/>
management.	contoso.com/metadata/endpoints?api-version=1.0").Content
portal.	ConvertFrom-Json
region1.	\$GalleryEndpoint.GalleryEndpoint

Correct Answer:

**Values****Answer Area**

```
$GalleryEndpoint = (Invoke-WebRequest  
-Uri "https://    
contoso.com/metadata/endpoints?api-version=1.0").Content  
  
ConvertFrom-Json  
  
$GalleryEndpoint.GalleryEndpoint
```

Box 1: portal.

A DNS entry is created for each endpoint in the external DNS zone that's specified at deployment time. For example, the user portal is assigned the DNS host entry of portal...

\* Portal (user) Portal..

Box 2: region1.

Note: Once your item has been successfully published to the marketplace, you can delete the content from the storage account.

All default gallery artifacts and your custom gallery artifacts are now accessible without authentication under the following URLs: [https://galleryartifacts.adminhosting.\[Region\].\[externalFQDN\]/artifact/20161101/\[TemplateName\]/DeploymentTemplates/Template.json](https://galleryartifacts.adminhosting.[Region].[externalFQDN]/artifact/20161101/[TemplateName]/DeploymentTemplates/Template.json)  
[https://galleryartifacts.hosting.\[Region\].\[externalFQDN\]/artifact/20161101/\[TemplateName\]/DeploymentTemplates/Template.json](https://galleryartifacts.hosting.[Region].[externalFQDN]/artifact/20161101/[TemplateName]/DeploymentTemplates/Template.json)

**QUESTION 4**

You have an Azure Stack Hub integrated system that connects to the Internet.

You need to update the Azure Event Hubs service.

Solution: From an internet-connected computer, you run the Update-AzureRmManagementGroup cmdlet.

Does this meet the goal?

A. Yes

B. No

Correct Answer: B

**QUESTION 5**

**HOTSPOT**

You have an Azure Stack Hub integrated system that is disconnected from the Internet. The integrated system is registered to an Azure Active Directory (Azure AD) tenant named contoso.com.

You need to download the latest Ubuntu image for Azure Stack Hub Marketplace.

How should you complete the PowerShell script? To answer, drag the appropriate cmdlets to the correct targets. Each cmdlet may be used once, more than once, or not at all. You may need to drag and split the bar between panes to scroll to

view content.

NOTE: Each correct selection is worth one point.

Hot Area:

**Answer Area**

	▼	-Environment AzureCloud -Tenant 'contoso.com'
Add-AzureRmEnvironment		
Connect-AzureRmAccount		
Select-AzureRmContext		
Set-AzureRmEnvironment		
Install-Module -Name	▼	
		Azs.AzureBridge.Admin
		Azs.Commerce.Admin
		Azs.Gallery.Admin
		Azs.Syndication.Admin
\$MarketplaceItems =	▼	
		Add-AzsGalleryItem
		Export-AzsMarketplaceItem
		Import-AzsMarketplaceItem
		Select-AzsMarketplaceItem
\$MarketplaceItems	▼	-RepositoryDir "D:\MarketplaceItems"
		Add-AzsGalleryItem
		Export-AzsMarketplaceItem
		Import-AzsMarketplaceItem
		Select-AzsMarketplaceItem

Correct Answer:

### Answer Area

```

-Environment AzureCloud -Tenant 'contoso.com'
Add-AzureRmEnvironment
Connect-AzureRmAccount
Select-AzureRmContext
Set-AzureRmEnvironment

Install-Module -Name
Azs.AzureBridge.Admin
Azs.Commerce.Admin
Azs.Gallery.Admin
Azs.Syndication.Admin

$MarketplaceItems =
Add-AzsGalleryItem
Export-AzsMarketplaceItem
Import-AzsMarketplaceItem
Select-AzsMarketplaceItem

$MarketplaceItems |
Add-AzsGalleryItem
Export-AzsMarketplaceItem
Import-AzsMarketplaceItem
Select-AzsMarketplaceItem -RepositoryDir "D:\MarketplaceItems"

```
