**QUESTION 1**

A third party survey provider offers both an API endpoint for individual survey data and an SFTP server endpoint that can accept batch survey data. The initial implementation of the integration includes

1.

Marking the order as requiring a survey before order placement

2.

On the order confirmation page, the survey form is displayed for the customer to fill

3.

The data is sent to the survey provider API, and the order is marked as not requiring a survey

Later it was identified that this solution is not fit for purpose as the following issues and additional requirements were identified:

1.

If the API call fails, the corresponding survey data is lost. The Business requires to avoid data loss.

2.

Some customers skipped the form. The Business requires sending a survey email to such customers.

3.

The Order Management System (OMS) uses a non-standard XML parser it did not manage to parse orders with the survey, until the survey attribute was manually removed from the xml.

How should the Architect address the issues and requirements described above?

A. Create a custom session attribute when the survey is required. Send to the API endpoint in real-time. On failure, capture the survey data in the session and reprocess, use the session attribute to send emails for the cases when survey was skipped.

B. Create a custom object to store the survey data. Send to the API endpoint using a job. On success, remove the custom object. On failure, send the survey data with API from the next execution of the same job. Use the custom object to send emails for the cases when the survey was skipped.

C. Create a custom object when the survey is required. Send to the API endpoint in real-time. On success, remove the object. On failure, capture the survey data in the custom object and later reprocess with a job. Use the custom object to send emails for the cases when survey was skipped.

D. Send the survey data to the API endpoint in real-time until the survey data is successfully captured. Instruct the OMS development team to update their XML parser, use the Order survey attribute to send emails for the cases when the survey was skipped.

Correct Answer: C

**QUESTION 2**

The Architect has been presented with a requirement from the business to implement a new LINK cartridge. The current site is built on the Storefront Reference Architecture, and the LINK cartridge is certified for Pipelines and Controllers. On review, the Architect notes that the Jobs are all created in Pipelines.

How should the Architect implement that cartridge to make sure the required jobs runs property?

- A. The Job Pipelines must be updated to use SiteGenesis Controllers.
- B. The job Pipelines must be removed and recreated with scripts.
- C. The job Pipelines must be updated to use SFRA Controllers.
- D. The job Pipelines must be updated to work as custom job steps.

Correct Answer: D

QUESTION 3

During code review, the Architect found that there is a service call on every visit of the product detail page (PDP).

What best practices should the Architect ensure are followed for the service configuration? Choose 2 answers

- A. Circuit breaker is enabled.
- B. Service timeout is set.
- C. Service mock up call is configured.
- D. Service logging is disabled.

Correct Answer: AB

QUESTION 4

An integration cartridge implements communication between the B2C Commerce Storefront and a third-party service provider. The cartridge contains the `localServiceRegistry` code:

```
var LocalServiceRegistry = require('dw/svc/LocalServiceRegistry');
module.exports = LocalServiceRegistry.createService('serviceprovider.rest.auth',
  (
    createRequest: function(svc) {
      var svcCredential = svc.getConfiguration().credential;
      if (empty(svcCredential.user) || empty(svcCredential.password)) {
        throw new Error('Basic Auth requires valid client ID (user) and secret (password)');
      }
      var requestBody = {
        clientId: svcCredential.user,
        clientSecret: svcCredential.password
      };
      svc.setAuthentication('NONE');
      svc.addHeader('Accept', 'application/json');

      return JSON.stringify(requestBody);
    },
    parseResponse: function(svc, httpClient) {
      return httpClient.text;
    }
  )
);
```

How does this code sample accomplish authentication to the service provider?

- A. By Issuing a Basic Auth request to the service provider.
- B. By performing a signed SOAP Auth request using a certificate.
- C. By wrapping the authentication service call with Basic Auth.
- D. By disabling Basic Auth and executing the service authentication call.

Correct Answer: D

QUESTION 5

During the testing of the login form, QA finds out that the first time the user can log in, but every other login attempt from another computer leads to the homepage and the basket being emptied. Developers tried to debug the issue, but when they add a breakpoint to the login action, it is not hit by the debugger.

What should the Architect recommend developers to check?

- A. Remove CSRF protection from Login Form Action.
- B. Add remote include for the login page
- C. Add disable cache page in the template ISML - .
- D. Check Login Form and any included templates for includes that enable page caching.

Correct Answer: B
