QUESTION 1

The decision to develop and implement a behavior intervention plan is not made unless:

A. the behavior has the potential to cause harm.

B. data show the need for behavior change exists.

C. the interdisciplinary team has determined that it is necessary.

D. staff who will implement the procedures have demonstrated proficiency.

Correct Answer: B

QUESTION 2

If the person gets back on task when he is touched, this is an example of:

A. Escape

B. Avoidance

C. Positive reinforcement

D. Stimulus fading

Correct Answer: A

QUESTION 3

Jimmy is watching his favorite Saturday morning cartoon and playing with his train set. The cat walks past

him and he pulls its tail. Jimmy\\'s mother takes away one of his train cars.

This is an example oF.

A. response intervention.

B. antecedent manipulation.

C. response cost.

D. overcorrection.

Correct Answer: C

QUESTION 4

The rehabilitation therapist wants to determine if the sensory integration sessions are helping to reduce Ed\\'s hand-

slapping. What is the BEST method for recording momentary time-sampling data?

A. Fifteen-minute observation periods are divided into 3-minute intervals. Staff then record whether or not hand-slapping is occurring at the end of each 3-minute interval.

B. Twenty-minute observation periods are divided into 10-minute intervals. Staff then record whether or not hand-slapping is occurring during each 10-minute interval.

C. Thirty-minute observation periods are divided into 2-minute intervals. Staff then record whether or not hand-slapping occurs at any moment during each 2-minute interval.

D. One-hour observation periods are divided into 10-minute intervals. Staff then record whether or not hand-slapping occurs at all during each 10-minute interval.

Correct Answer: A

QUESTION 5
