QUESTION 1

What is the primary benefit of Edge Cloud?

- A. Lower latency
- B. Higher Availability
- C. Larger Bandwidth
- D. Lower Cost

Correct Answer: A

Reference: <https://www.nokia.com/networks/portfolio/edge-cloud/>

QUESTION 2

What are the benefits of the stateless or state-efficient aspects of network functions?

- A. Avoid massivedatabase corruption
- B. Provide real time access to the databases
- C. Enable scalability and extreme resiliency in the 5G Core
- D. Ensure the database integrity

Correct Answer: C

Reference: <https://www.nokia.com/about-us/news/releases/2018/01/29/nokia-implements- future-x-network- architecture- for-5g-to-deliver-breakthrough-network-performance-and- reduce-costs/>

QUESTION 3

Which of the following best defines what is meant by Network Slice isolation?

- A. Security + Cloud isolation
- B. Resource + Security isolation
- C. Transport + Cloud isolation
- D. Resource + Traffic isolation

Correct Answer: B

**QUESTION 4**

A company is planning to offer services to different cities worldwide so drones can be used to scan disaster areas to help identify victims' locations quickly, organize evacuations efficiently, and save lives. Drones will be connected to a 5G network. The company is planning to offer two applications running in the cloud ?one to manage drones through remote control while the other offers live video streaming to drone operators. As a 5G professional, you are asked what are the network requirements for those two applications?

- A. The drone control application needs very low latency to maneuver around obstacles, while the video application would need less latency. Both applications would be running in the central cloud.
- B. The drone control application needs low latency and high reliability from the network and should run in the edge cloud. The video application needs higher throughput but it is not sensitive from the latency and reliability point of view. It can run in a central cloud.
- C. Both applications should run in the edge cloud because the drone control and video applications both require low latency and high reliability from the network.
- D. The drone control application should run through a central cloud. The video streaming application should run in the edge cloud because it carries much data, and that is expensive to run through the central cloud.

Correct Answer: B

QUESTION 5

Which of the following is not a component of the 5G Flexible RAN architecture?

- A. Radio Unit
- B. Distributed Unit
- C. Centralized Unit
- D. Optical Unit

Correct Answer: D
