**QUESTION 1**

The process model below shows a development practice that is inefficient and may cause performance issues in an IBM BPM application when a high volume of process instances are executed at the same time. Which inefficient development practice is modeled below?

- A. Not clearing variables in exposed human services
- B. Requiring user intervention in each loop iteration
- C. Using sequential system lane activities inefficiently
- D. Using multi-instance loops in system lane or batch activities

Correct Answer: A

QUESTION 2

Which statement describes using a Service Call control from the BPM UI toolkit to invoke a service flow?

- A. It is used to invoke a service without having to use boundary events and has an input and output variable with on load, on invoked, on result, on error events. It can be placed in client side human service coach page or inside coach view.
- B. A Service flow which has an input and output variable and a service task activity inside it calling an implementation service.
- C. It is used to invoke a service that returns the data displayed in the table, never bound to variable, with on load, on service data loaded, on service data error events. It can be placed in client side human service coach page or inside coach view.

D. It is coupled with the human service in which it is used. It is created in the library area where User Interface library items are stored.

Correct Answer: B

QUESTION 3

In IBM BPM, what needs to be done to use an external service in a Service Flow?

- A. Use a Modify Task activity type to invoke an operation of the external service
- B. Use a Service Task activity type to invoke an operation of the external service
- C. Use a Decision activity type to invoke the rules of an external service
- D. Use a Content Integration Task activity type to invoke an operation of the external service

Correct Answer: C

QUESTION 4

A developer believes there is an issue with a UCA being invoked. What are two places the developer can look for more information?

- A. SystemOut.log
- B. Process Admin \\'Event Manager\\' page
- C. Process Admin \\'Installed Apps\\' page
- D. Process Designer \\'Process Details\\' page
- E. Process Portal \\'Process Instance Details\\' page

Correct Answer: AD

QUESTION 5

Which method should be used for passing an external complex variable type to the IBM BPM Web API?

- A. Pass the complex variable type as-is to the web API.
- B. Convert the variable to XML and wrap it in a ComplexValue object.
- C. Convert the complex variable to a String via the . toString () method.
- D. Passing external complex variable types to the web API are not supported.

Correct Answer: C
