QUESTION 1

What does a developer need to do to view the artifacts and their dependencies that are used across all toolkits in the IBM Process Center repository?

A. Get Administrative rights.

B. Use the Global scope option.

C. Use the POST /bpm/repo/projects REST API.

D. Ensure that the Process Centers are registered to each other and enabled for sharing.

Correct Answer: B

QUESTION 2

Which statement is true when exposing a BPM function as a web service to exterior systems?

A. All operations exposed in a web service are one-way operations.

B. All operations exposed in a web service are request-response operations.

C. Operations exposed in a web service can be both one-way operations or callback operations.

D. Operations exposed in a web service can be both one-way operations or request-response operations.

Correct Answer: B

QUESTION 3

Where can business process users start manual unstructured (Adhoc) activities that are not hidden?

A. Work details page in Process Portal

B. Launch details page in Process Portal

C. Process Instance details page in Process Portal

D. Process Performance details page in Process Portal

Correct Answer: C

QUESTION 4

What is a valid reason why a development team might consider designing a process application with an externalized UI?

A. The IBM BPM UI toolkit does not work on mobile devices.

B. IBM BPM does not provide a UI framework that works with integrated systems.

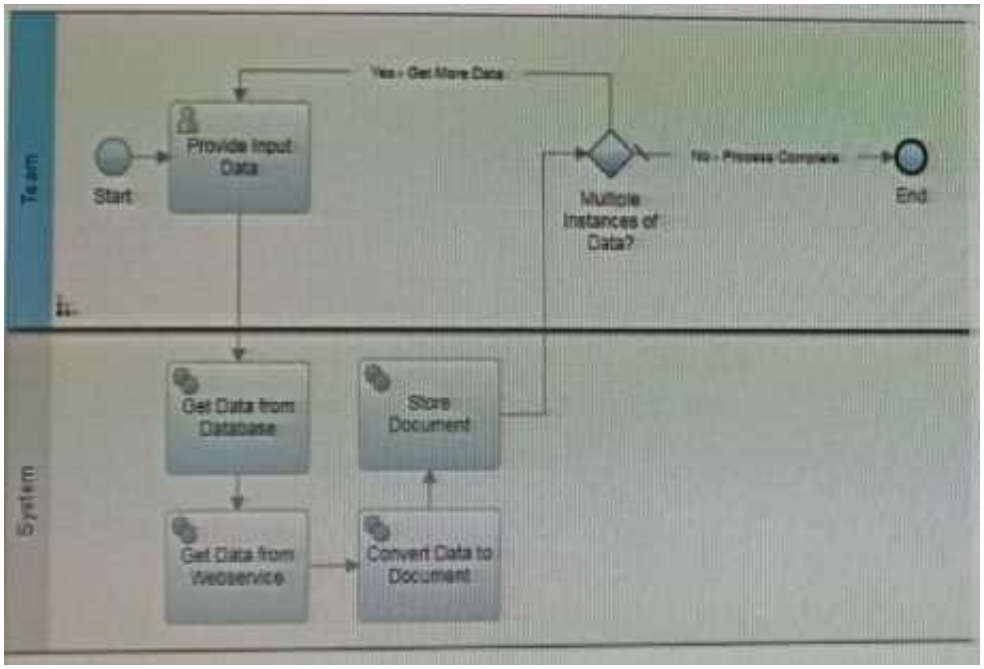
C. The IBM BPM UI framework requires an additional software purchase in addition to IBM BPM.

D. An organization might need to embed task list and human activity into existing systems instead of using the IBM BPM UI framework.

Correct Answer: D

QUESTION 5

The process model below shows a development practice that is inefficient and may cause performance issues in an IBM BPM application when a high volume of process instances are executed at the same time. Which inefficient development practice is modeled below?



A. Not clearing variables in exposed human services

B. Requiring user intervention in each loop iteration

C. Using sequential system lane activities inefficiently

D. Using multi-instance loops in system lane or batch activities

Correct Answer: A
