- A. Training
- B. Reasoning
- C. Scoring
- D. Adapting
- E. Understanding

Correct Answer: A

QUESTION 3

What is the function of IBM Cloud Log Analysis?

- A. Monitors worker nodes, containers, replica sets, and services
- B. Monitors the administrative activity made in the cluster
- C. Provides infrastructure and application performance monitoring with a GUI
- D. Expands log collection, retention, and search abilities

Correct Answer: B

QUESTION 4

Which are two limitations of the CouchBackup tool?

- A. The database cannot be accessed while the tool is running
- B. Index definitions are backed up by the tool but the content of indexes is not
- C. it does not offer a way to restore backups
- D. It's not possible to embed tool commands into UNIX shell scripts
- E. Attachments are not backed up by the tool

Correct Answer: BE

<https://cloud.ibm.com/docs/services/Cloudant?topic=cloudant-ibm-cloudant-backup-and-recovery>

The CouchBackup tools have the following limitations:

security settings are not backed up by the tools.

Attachments are not backed up by the tools.

Backups are not precisely accurate "point-in-time" snapshots.

The reason is that the documents in the database are retrieved in batches, but other applications might be updating documents at the same time. Therefore, the data in the database can change between the times when the first and last batches are read. Index definitions that are held in design documents are backed up, but the content of indexes is not backed up.

This limitation means that when data is restored, the indexes must be rebuilt.

The rebuilding might take a considerable amount of time, depending on how much data is restored.

QUESTION 5

What IBM Cloud service can be used to add authorization and authentication to a mobile and web application?

- A. App ID
- B. Activity Tracker
- C. Certificate Manager
- D. Internet Services

Correct Answer: A
