QUESTION 1

What term describes applications specifically designed to run in cloud environments?

A. Cloud-Native

B. Legacy

C. Event-Driven

D. Serverless

Correct Answer: C

QUESTION 2

What is a feature of IBM Cloud Internet Services Web Application Firewall (WAF)?

A. Encrypts communication using Transport Layer Security

B. Provides DDoS protection

C. Controls the origin servers to which a given client is directed

D. Filter out illegitimate traffic automatically

Correct Answer: A

QUESTION 3

Which statement is true regarding SAN storage in IBM Cloud Virtual Servers?

A. Moved disks keep the storage type of the source server

B. Public virtual servers that use balanced local storage can detach secondary disks

C. It is built on disks that are local to the virtual server host

D. All secondary disks are attached as portable storage

Correct Answer: B

QUESTION 4

What are two services or capabilities for developing and deploying microservices in IBM Cloud?

A. Polyglot programming and persistent data store

B. Tools for testing and rapid deployment

C. Services to analyze and visualize data

D. Graphical tools for modeling

E. Backup and monitoring tools

Correct Answer: AB

QUESTION 5

Which are two limitations of the CouchBackup tool?

A. The database cannot be accessed while the tool is running

B. Index definitions are backed up by the tool but the content of indexes is not

C. it does not offer a way to restore backups

D. It\\'s not possible to embed tool commands into UNIX shell scripts

E. Attachments are not backed up by the tool

Correct Answer: BE

https://cloud.ibm.com/docs/services/Cloudant?topic=cloudant-ibm-cloudant-backup-and-recovery

The CouchBackup tools have the following limitations:

security settings are not backed up by the tools.

Attachments are not backed up by the tools.

Backups are not precisely accurate "point-in-time" snapshots.

The reason is that the documents in the database are retrieved in batches, but other applications might be

updating documents at the same time. Therefore, the data in the database can change between the times

when the first and last batches are read. Index definitions that are held in design documents are backed

up, but the content of indexes is not backed up.

This limitation means that when data is restored, the indexes must be rebuilt.

The rebuilding might take a considerable amount of time, depending on how much data is restored.
