QUESTION 1

Which option meets the requirement to provide online snapshot backups for an enterprise Oracle database?

A. Rocket Device Adapter Pack

B. IBM Backup-Archive for Oracle

C. IBM Tivoli Storage Manager FastBack

D. IBM Tivoli Storage FlashCopy Manager

Correct Answer: C

Reference: Best Practices Guide for Oracle Databases with IBM XIV Storage System Snapshots, XIV Snapshots for Backup/Restore using Tivoli Storage FlashCopy Manager

QUESTION 2

What describes recalled files that are in resident state in relationship to space management?

A. The file is in memory on the client.

B. The file is moved to the storage pool type=backup.

C. The migrated copy in the storage pool is expired at the next reconciliation.

D. The file is not deleted in the migrated copy in IBM Tivoli Storage Manager storage.

Correct Answer: C

If you modify a recalled file, it becomes a resident file. The next time your file system is reconciled, the space monitor daemon marks the stored copy for expiration.

QUESTION 3

What is the purpose of the VirtualNodename option?

A. To restore or retrieve files from UNIX to Windows.

B. To restore or retrieve files from another workstation.

C. To transfer the IBM Tivoli Storage Manager (TSM) backup/restore client node password information to a system.

D. To automatically allocate the same amount of space on the target TSM backup/restore client.

Correct Answer: B

The virtualnodename option specifies the node name of your workstation when you want to restore or retrieve files to a different workstation.

QUESTION 4

What is the purpose of the set access command?

A. It enables the client for restore.

B. It allows the user to perform cross client restore.

C. It allows the administrator to perform client actions.

D. It allows clients to communicate with the IBM Tivoli Storage Manager server.

Correct Answer: B

The set access command gives users at other nodes access to your backup versions or archived copies. You can give another user access to a specific file, multiple files, or all files in a directory. When you give access to another user, that user can restore or retrieve your objects. Specify in the command whether you are giving access to archives or backups.

QUESTION 5

What is left on the client disk when a file is migrated using IBM Tivoli Storage Manager space management?

A. a mig file

B. a stub file

C. no file is left

D. a directory file

Correct Answer: B

When a file is migrated from your local system to Tivoli Storage Manager storage, a placeholder, or stub file, is created in place of the original file. Stub files contain the necessary information to recall your migrated files and remain on your local file system so that the files appear to reside locally. This contrasts with archiving, where you usually delete files from your local file system after archiving them.
