### QUESTION 1

What happens when PerformanceMonitorOn is set to true (T) in the tm1 s.cfg file?

- A. User access is restricted to the TM1 Server while server diagnostics occur.
- B. TM1 performance monitoring records performance statistics for clients, cubes, and the TM1 Server.
- C. Advanced error logging occurs when running TurboIntegrator processes.
- D. Feeder optimization is traced and logged into a system control cube.

Correct Answer: B

---

### QUESTION 2

For each TM1 Server running, the Admin Server maintains which three components? (Choose three.)

- A. Server name
- B. Security permissions
- C. Port number
- D. IP address
- E. Web portal settings

Correct Answer: ACD

---

### QUESTION 3

You have been asked by the IT manager to create a data flow chart displaying the relationships between all cubes in your TM1 Server. The model does not have any T1 processes that move data between cubes.

How would you find the relationships between all of the cubes in the model?

- A. Extract Dependencies from the trn1server.log.
- B. Extract Elements from the "Cube Relationships" measure in the \\CubePropertiescube
- C. Extract "TM1CubeImpl" entries from the tm1 server.log.
- D. Extract Source and Target data points from the tm1s.log.

Correct Answer: A

---

### QUESTION 4

You must configure an online backup for running a TM1 application. Which statement is true in this scenario?

- A. You must exclude TMIs.cfg files from the files to be backed up.
- B. You must exclude all log files from the files to be backed up.
- C. You must execute a SaveDataAll function before the backup.
- D. You must execute a PrepareBackup function before the backup.

Correct Answer: C

---

### QUESTION 5

A company has TM1 production servers scattered across the globe. The North American server contains the base data that is used by all servers globally. The source data for the North American TM1 Server resides locally and is updated using an ODBC connection.

What is the optimal TM1 method for keeping the base data in the global TM1 servers consistent with the base data in the North American TM1 Server?

- A. Send copies of the TM1 log files from the North American server to the administrator of each global TM1 server and have them process it against their local TM1 Server.
- B. Have a compressed copy of the North American production TM1 Server's data directory sent to the other global locations using FTP and restore this data onto each local TM1 Server.
- C. Set up an ODBC connection to the North American production source data on each of the TM1 servers across the globe and run TurboIntegrator processes to update the global TM1 servers.
- D. Set up a replication and synchronization nightly chore between the TM1 servers across the globe and the TM1 Server in North America.

Correct Answer: D
