QUESTION 1

How are CPU, memory, I/O, and disk allocated in a cloud infrastructure?

- A. CPU, memory, I/O, and disk are pooled.
- B. CPU, memory, and disk are pooled and I/O is dedicated.
- C. CPU and memory are pooled while disk and I/O are dedicated.
- D. Disk and memory are dedicated while CPU and memory are pooled.

Correct Answer: A

QUESTION 2

What is a benefit of implementing application code instrumentation, such as the ARM specification, in cloud computing to improve application management and monitoring functions?

- A. measurement of customer experience
- B. evidence of meeting service level agreements
- C. improved business and operational service views
- D. notification/escalation of alerts and automated restore of service

Correct Answer: D

QUESTION 3

A company decides to make some development and application environments available as cloud services.

What should they do to reduce the management overhead of the cloud service catalog?

- A. They should populate the cloud service catalog with standardized development and application environments.
- B. They should populate the cloud service catalog with the development and application environments that cost the most to build.
- C. They should populate the cloud service catalog with the development and application environments that require business rules.
- D. They should populate the cloud service catalog with the development and application environments utilized by a majority of users.

Correct Answer: A

QUESTION 4

What are two optimized workload characteristics supported by the IBM cloud portfolio? (Choose two.)

- A. analytics
- B. tightly-coupled
- C. centralized message bus
- D. high-performance computing
- E. structured related data model

Correct Answer: AD

QUESTION 5

When designing for the protection of data stored in the cloud, including the deployment of firewall configurations, which two conditions must be included? (Choose two.)

- A. deny access from untrusted sources or applications
- B. map network interfaces and firewall locations for customer distribution
- C. detect back-level personal firewall software on customer desktops and laptops
- D. prohibit direct access from external interfaces into the restricted network zones
- E. install personal firewall software on all active servers within the cloud infrastructure

Correct Answer: AD
