QUESTION 1

Merchele is working on a gadget and would like it to render locally. She understands that the OpenSocial Component will read data from the local replica of the widget catalog. However, she is finding that it is not rendering locally.

Which might be a reason for this?

A. The ACL is not set properly on the local replica.

B. The gadget is using OAuth and needs to run remotely.

C. The IBM Notes client is not capable of handling trust management.

D. An instance of the IBM Domino server with Shindig is installed locally.

Correct Answer: B

QUESTION 2

OAuth does not require a specific interaction pattern which makes it ideal for which reason?

A. For cases where OpenID is required and available to the consumer.

B. For cases where OpenID is not required but is available to the consumer.

C. For cases where authentication credentials are unavailable to the consumer.

D. For cases where authentication credentials are always available to the consumer.

Correct Answer: A

QUESTION 3
