**QUESTION 1**

A Sterling Connect:Direct for Windows administrator included a new remote node definition into netmap according to the exhibit below:

The image shows two screenshots of the 'Netmap Node Properties' dialog box. The left screenshot shows the 'Main' tab with the following fields: Node Name (REMOTENODE), Operating System (Windows), Max Pnode Sess (5), Max Snode Sess (5), Default Class (1), and Retry Settings (Short Term: 5 attempts, 00:01:00 interval; Long Term: 5 attempts, 00:05:00 interval). The right screenshot shows the 'TCP/IP' tab with the following fields: Host/IP Address (192.168.139.128), Port/Service (1364), Mode Override (Mode 1), and Alt Comm Outbound (192.168.139.129).

When the administrator submitted a process to this remote node, the first attempt to establish the session with address 192.168.139.128 failed due a network connection failure. What is the expected behavior for this process?

- A. It will retry using the maximum of 10 attempts to establish the session with address 192.168.139.129.
- B. It will try once with address 192.168.139.129. If the session is not established with 192.168.139.129 then it will retry using the maximum of 10 attempts to establish the session with address 192.168.139.128.
- C. It will retry using the maximum of 5 attempts to establish the session with address 192.168.139.128. If the session is not established then it will retry using the maximum of 5 attempts to establish the session with address 192.168.139.129.
- D. It will retry using the maximum of 10 attempts to establish the session with address 192.168.139.128. If the session is not established then it will retry using the maximum of 10 attempts to establish the session with address 192.168.139.129.

Correct Answer: BC

QUESTION 2

Cyclic redundancy check (CRC) is used:

- A. to detect corrupted data.

- B. as an extended compression algorithm.
- C. to encode hash algorithms in SSL / TLS protocols.
- D. to encode version 2 Function Management Headers.

Correct Answer: A

QUESTION 3

A Sterling Connect:Direct for UNIX administrator has just started the Connect:Direct for UNIX application. The next step in verifying the installation is to start up the Connect:Direct client. What UNIX environment variable needs to be set before the Command Line Interface (CLI) can be accessed?

- A. PATH
- B. DISPLAY
- C. HOSTNAME
- D. NDMAPICFG

Correct Answer: D

QUESTION 4

Which tools can be used to create a Connect:Direct process that will perform syntax checking of the process?

- A. Sterling Secure Proxy
- B. Sterling Control Center
- C. Sterling Certificate Wizard
- D. Sterling Connect:Direct Browser

Correct Answer: D

QUESTION 5

A Sterling Connect:Direct for Windows is running on a server in the PROD domain. The administrator needs to grant access to a new user, "user1", who is a member of the SALES domain. Which name, if any, should be entered when creating a new entry in Functional Authorities?

- A. user1
- B. SALES\user1
- C. user1@SALES
- D. Domain users are not supported.

Correct Answer: C
