**QUESTION 1**

What URL structure is needed to connect to a non-HA FCM object store via EJB?

- A. t3://FCM_hostname:port_number/FileNet/Engine
- B. iiop://FCM_hostname:port_number/FileNet/Engine
- C. http://FCM_hostname:port_number/wsi/FNCEWS40SOAP/wsd
- D. http://FCM_hostname:port_number/wsi/FNCEWS40MTOM/wsd

Correct Answer: A

QUESTION 2

A company plans to develop separate workflow applications for various business departments.

Which one of the following approaches should be considered in order to efficiently locate active workflows of a specific application?

- A. Create in-baskets for each workflow applications.
- B. Create a separate isolated region for each workflow application.
- C. Create a separate workflow roster for each workflow application.
- D. Create a separate application space for each workflow application.

Correct Answer: D

QUESTION 3

By default what log file will be generated in IBM FileNet Content Manager V.5.2.1 when an administrator enables tracing for process clients to troubleshooting a problem were workflows will not manually launch when content is added to the object store?

- A. pe_api_trace.log
- B. p8_server_trace.log
- C. File name configured in the fnlog4j.properties file.
- D. File name configured in the application server administration console.

Correct Answer: B

QUESTION 4

The customer environment is highly available with two IBM FileNet Content Platform Engine (CPE) servers (node 1 and node 2) and Workplace XT. Both node 1 and node 2 are fronted by a hardware load balancer.

Which of the following steps BEST describes how to test the CPE's high availability?

- A. While nodes 1 and 2 are running, create a document via Workplace XT, verify document exists, shutdown node 1, check-out newly created document, bring node 1 back up, shutdown node 2, check-in the document with new content and bring node 2 back up.
- B. While node is running, create a document via Workplace XT, verify document exists, shutdown node 1, start node 2, check-out newly created document, bring node 1 back up, shutdown node 2, check-in the document with new content and bring node 2 back up.
- C. While nodes 1 and 2 are running, disable the hardware load balancer, create a document via Workplace XT, verify document exists, shutdown node 1, check-out newly created document, bring node 1 back up, shutdown node 2, check-in the document with new content and bring node 2 back up.
- D. While nodes 1 and 2 are running, create a document via Workplace XT, verify document exists, shutdown node 1, check-out newly created document, disable the hardware load balancer, bring node 1 back up, shutdown node 2, check-in the document with new content, bring node 2 back up and enable hardware load balancer.

Correct Answer: D

QUESTION 5

By default Content Search Services logs are stored in the \\IBM\Content Search Services\CSS Server\logs directory.

What file in this directory would you review for information, warning, and error messages that are logged during server activity?

- A. default*.log
- B. monitor*.csv
- C. adminAudit.csv
- D. p8_css_trace*.log

Correct Answer: B
