**QUESTION 1**

When comparing two differently grained facts directly against one another, the developer must:

- A. either write a union query or two reports that roll both facts up to a common level
- B. either roll up the lower grained fact to the higher level or allocate the higher grained fact to the lower level
- C. declare determinants at multiple levels in the dimensions of a DMR Framework Manager model
- D. ensure that all conformed dimensions shared by the facts have the same number of levels

Correct Answer: B

QUESTION 2

A multi-server installation of Cognos BI must be performed.

Which of the following is a valid strategy for installing across multiple servers?

- A. Separate the gateway component from other server components to restrict report request processing to the Web server tier.
- B. Enable dedicated request processing, by installing a dispatcher in the Web server tier to act as a primary dispatcher for routing requests to other dispatchers.
- C. Scale the system vertically by installing one instance of all Cognos 8 services on a larger computer capable of managing more concurrent request threads.
- D. Enable load balancing of requests for content management services by installing multiple instances of Content Manager.

Correct Answer: B

QUESTION 3

Which of the following is true regarding hierarchies and dimensions?

- A. Hierarchies help users understand the data through rollup levels within dimensions.
- B. All dimensions must have hierarchies.
- C. All hierarchies are defined by the inherent nature of their dimensional data.
- D. It is considered poor design to split a hierarchy across multiple dimensions.

Correct Answer: A

QUESTION 4

Which of the following is correct regarding the processing of a PageDown high affinity request?

- A. The request is routed to the same process that served up the originating low affinity request if the process is available and if there is an available high affinity connection.
- B. The request is given priority and is always processed by the same process that served up the originating low affinity request.
- C. The request is load-balanced and is sent to any available dispatcher in the system.
- D. The request is automatically queued and is processed by the first available low affinity connection in the system.

Correct Answer: A

QUESTION 5

Which of the following BEST describes the relationship or differences between Iterative Approach and Cognos SIM?

- A. The Iterative Approach is a specific technique used to iterate through the Design phase.
- B. The Iterative Approach is a series of steps defined in the Analysis and Development phases of Cognos SIM.
- C. The Iterative Approach is a philosophy of development while Cognos SIM is a collection of tasks, documents, and techniques to guide development.
- D. Cognos SIM is the current Cognos development standard and is intended to replace the Iterative Approach for development of BI applications.

Correct Answer: C
