**QUESTION 1**

A job validates account numbers with a reference file using a Join stage, which is hash partitioned by account number. Runtime monitoring reveals that some partitions process many more rows than others. Assuming adequate hardware resources, which action can be used to improve the performance of the job?

- A. Replace the Join with a Merge stage.
- B. Change the number of nodes in the configuration file.
- C. Add a Sort stage in front of the Join stage. Sort by account number.
- D. Use Round Robin partitioning on the stream and Entire partitioning on the reference.

Correct Answer: B

QUESTION 2

In the exhibit, a Funnel stage has two input links. Input 1 (Seq_File) comes from a Sequential File stage with "Readers per Node" set to "2". Input 2 (DataSet) comes from a dataset created with 3 partitions. In the Funnel stage, the funnel type is set to "Sequence".

The parallel configuration file contains 4 nodes.

How many instances of the Funnel stage run in parallel?

- A. 1
- B. 2
- C. 4
- D. 6

Correct Answer: C

QUESTION 3

The data going into the target Sequential File stage is sorted in each partition by the Date field.

You want the data in the sequential file to be sorted by Date.

Which collection algorithm should you choose in the Sequential File stage?

- A. Auto
- B. Ordered
- C. Sort Merge
- D. Round Robin

Correct Answer: C

QUESTION 4

You would like to run a particular processing job within a job sequence for each weekday.

What two methods could be used? (Choose two.)

- A. Set the frequency property in the job scheduler to weekdays only.
- B. Add the job scheduler stage to the job sequence and set to weekdays only.
- C. Call a routine in the job sequencer that starts the processing job for each day you would like to process.
- D. Have a parameter set that contains the days of the week you would like to process and routine to parse the days of the week contained in the "day" parameter.
- E. Start Loop and End Loop activity stages on the job sequencer canvas where you loop through the days and pass a value for each day into the job via parameter.

Correct Answer: CE

QUESTION 5

You would like to pass values into parameters that will be used in a variety of downstream activity stages within a job sequence. What are two valid ways to do this? (Choose two.)

- A. Use local parameters.
- B. Place a parameter set stage on the job sequence.
- C. Add a Transformer stage variable to the job sequence canvas.
- D. Check the "Propagate Parameters" checkbox in the Sequence Job properties.
- E. Use the UserVariablesActivity stage to populate the local parameters from an outside source such as a file.

Correct Answer: AE
