QUESTION 1

When building a field level survivorship routine and the same business rule applies to all address columns, what is the most efficient way to do this?

- A. Move all of the address columns to the target field and define a single rule.
- B. You must use the complex survive expression identifying each address field.
- C. Because logic is being applied at the field level all fields need to have a rule defined.
- D. Apply the survivorship rule directly to the available columns and not to the target column.

Correct Answer: B

QUESTION 2

Which statement is true?

- A. A batch QualityStage match job must have a match statistics output link.
- B. You can override match designer cutoff thresholds within the QualityStage match stage.
- C. To add or remove output links in my QualityStage batch job, you must re-provision the match designer as well as re-compiling the batch match job.
- D. A comma delimited text file format is required for the match designer sample input data defined in the Test Environment tab in the match designer interface.

Correct Answer: C

QUESTION 3

Which statement is true regarding Quality Stage data survivorship?

- A. Survivorship is used to create groups of duplicate records.
- B. The Survive stage is used to mark records as possible duplicates.
- C. The Survive stage is used after matched record groups have been identified.
- D. The Survive stage can be used to correct and identify unhandled data from the Standardize stage.

Correct Answer: C

QUESTION 4

Which statement represents the pattern that does NOT end with a number?

A. + | + | + | \$

B. + | + | !A | \$

C. + | + | nA | \$

D. +1 + | A | \$

Correct Answer: C

QUESTION 5
