**QUESTION 1**

Which is NOT a valid method for prefetching data?

- A. Smart data prefetching
- B. Read-ahead prefetching
- C. Consecutive prefetching
- D. Sequential detection prefetching

Correct Answer: C

---

**QUESTION 2**

Given the following CREATE TABLE statement:

```
CREATE TABLE students
(schoo_id INT NOT NULL,
program_id INT NOT NULL,
student_num INT NOT NULL,
student_id INT NOT NULL,
first_name CHAR(30),
last_name CHAR(30),
gpa FLOAT)
ORGANIZE BY KEY SEQUENCE
(student_id STARTING FROM 1 ENDING AT 1000000)
ALLOW OVERFLOW
```

Which statement is correct?

- A. A range-clustered table is created and only values from 1 to 1000000 can be stored in the STUDENT\_ID column.
- B. A range-partitioned table is created and only values from 1 to 1000000 can be stored in the STUDENT\_ID column.
- C. A range-clustered table is created and values outside the range of 1 to 1000000 can be stored in the STUDENT\_ID column.
- D. A range-partitioned table is created and values outside the range of 1 to 1000000 can be stored in the STUDENT\_ID column.

Correct Answer: C

---

**QUESTION 3**

In what situation should you use a redirected restore operation?

- A. You want to drop a storage group during a restore process.
- B. You want to move data from one operating system to another.
- C. You want to restore your table spaces into new storage groups.
- D. You want to restore your table space containers into a different physical location.

Correct Answer: D

---

#### QUESTION 4

To configure instance-level auditing with db2audit, which authority is required?

- A. SYSADM
- B. SYSCTRL
- C. SECADM
- D. SYSMANT

Correct Answer: A

---

#### QUESTION 5

A storage group named HOT\_SG was created as follows:

```
CREATE STOGROUP hot_sg
ON '/mnt/ssd_path1', '/mnt/ssd_path2'
OVERHEAD 0.75
DEVICE READ RATE 500
DATA TAG 1
SET AS DEFAULT
```

What does the DATA TAG 1 clause do?

- A. It indicates that the multiple storage paths referenced in the HOT\_SG storage group definition exist in one physical location.
- B. It tells the DB2 Optimizer that database objects stored in the HOT\_SG storage group are to be given preference over other objects when data access plans are generated.
- C. It indicates that the value 1 is to be assigned to data stored in the HOT\_SG storage group, which Workload Manager (WLM) can then use to determine the processing priority to assign to database activities that interact with this data.
- D. It assigns a unique identifier to the instance of the HOT\_SG storage group being defined; this identifier can then be used when moving table spaces to and from the storage group, when dropping the storage group, or when commenting on the storage group.

Correct Answer: C
