**QUESTION 1**

A database named TEST and a storage group named SG_1 were created with these statements:

```
CREATE DATABASE test ON /mnt/fssystem1, /mnt/fssystem2;  
CREATE STOGROUP sg_1 ON '/mnt/fssystem3', '/mnt/fssystem4';
```

Later, when a DDA tried to execute the following statements:

```
ALTER STOGROUP sg_1 ADD '/mnt/fssystem5';  
DROP STOGROUP ibmstogroup;
```

an error was produced. Why did the error occur?

- A. The current default storage group cannot be dropped.
- B. New storage paths cannot be added to existing storage groups.
- C. The storage group IBMSTOGROUP cannot be dropped because it is a system-defined storage group.
- D. The storage group SG_1 was not the current default storage group at the time a new storage path was being added to it.

Correct Answer: A

QUESTION 2

What must be done to convert a populated base table to a multidimensional clustering (MDC) table?

- A. Export the data, create an MDC table, and then import or load the data into the MDC table.
- B. Execute the ALTER TABLE ... ORGANIZE BY DIMENSIONS statement to convert the table.
- C. Create an MDC table and then move the data in the base table to the MDC table with the db2move command.
- D. Export the data, execute the ALTER TABLE ... ORGANIZE BY DIMENSIONS statement to convert the table, and then import or load the data into the converted table.

Correct Answer: A

QUESTION 3

Which statement about data type mappings is true in a federated system?

- A. The Oracle DOUBLE data type maps to the DB2 type FLOAT by default.
- B. Data types can be mapped in both directions between a remote and local data type.

- C. Cast functions can be pushed down to remote servers even if a counterpart function does not exist there.
- D. For relational data sources, the degree to which you can override existing data type mappings or create mappings is limited.

Correct Answer: B

QUESTION 4

Which statement about Q Replication is correct?

- A. It uses continuous log shipping to replicate from the source database to the target database.
- B. It uses HADR message queues to transmit transactions between source and target databases.
- C. It uses WebSphere MQ message queues to transmit transactions between source and target databases.
- D. It uses replication control tables and changed data tables to replicate from the source database to the target database.

Correct Answer: C

QUESTION 5

What must you do before an online table space backup operation can be performed?

- A. Create a full database backup image.
- B. Create one or more tables in the table space.
- C. Create an incremental backup image of the table space.
- D. Set the DB2_ENABLE_ONLINEBKUP registry variable to ON.

Correct Answer: A
