QUESTION 1

Which is a function of the first tier in the IBM Cognos BI architecture?

- A. Authenticate users to the correct namespace.
- B. Pass requests to a IBM Cognos BI dispatcher for processing.
- C. Render the IBM Cognos Connection and Metric Studio interfaces.
- D. Start IBM Cognos BI services configured and enabled on a computer.

Correct Answer: A

QUESTION 2

At what level should the logging be set to capture the following set of details? user account management and runtime usage of IBM Cognos BI, use requests, and service requests and responses.

- A. Trace
- B. Basic
- C. Request
- D. Minimal

Correct Answer: C

QUESTION 3

Computer 1 is set up as a gateway. Computer 2 is set up as a report server. Computer 3 is set up as a report server. Computer 4 is set up as a content manager. To avoid performance downgrades as a result of many users running reports interactively, which of the following configurations will achieve improved performance for report processing?

- A. Disable the report service and batch report service on Computer 2.
- B. Disable the presentation service on Computer 2.
- C. Disable the report service on Computer 3.
- D. Disable the presentation service on Computer 4.

Correct Answer: D

QUESTION 4

Which of the following is true regarding the IBM Cognos BI gateway?

- A. The gateway can be configured to send requests directly to the Content Manager.
- B. For failover, the gateway can be configured to know the location of multiple dispatchers.
- C. When more than one dispatcher is available, the gateway can automatically balance the load of requests by sending them to any dispatcher.
- D. If the gateway is installed on a machine that is separate from where other IBM Cognos BI components are installed, the services for the gateway must be started first.

Correct Answer: B

QUESTION 5

What must the administrator do to set up the sample audit reports that come with IBM Cognos BI?

- A. Create a separate data source connection to the content store.
- B. Set up an audit database and configure log messages to be sent to the database.
- C. Set up a log file and configure log messages to be sent to the file.
- D. Create a Framework Manager model using either a database or flat file as the data source, and then publish a package.

Correct Answer: D
