QUESTION 1

IBM Security Access Manager (ISAM) V.90 provides an External Authentication Interface (EAI) that enables the extension of the authentication process for WebSEAL. The identity information returned by the EAI service is used to generate user credentials. This can be used as one of the methods to implement step-up authentication.

How is this authentication information returned from the EAI server?

A. HTTP headers

B. HTTP parameters

C. [step-up] stanza

D. [authentication-levels] stanza

Correct Answer: A

QUESTION 2

An IBM Security Access Manager V9.0 deployment professional wants to be alerted by the appliance for events like certificate expiry.

In which two ways can these alert notifications be configured? (Choose two.)

A. SNMP

B. SMS text

C. RSS Feed

D. Desktop Alert

E. Remote Syslog

Correct Answer: AE

QUESTION 3

A customer has expressed the requirement that users accessing online-banking application must first authenticate using a userid/password and successfully enter a one-time PIN which is texted to a cell phone.

Which two IBM Security Access Manager (ISAM) V9.0 modules are required to fully implement the solution? (Choose two.)

A. ISAM PAM Module

B. ISAM Cloud Module

C. ISAM Federation Module

D. ISAM Advanced Control Module

E. ISAM Access Manager Platform

Correct Answer: CE

QUESTION 4

The customer currently maintains all its users in Active Directory. As part of its new IBM Security Access Manager (ISAM) V9.0 deployment, the customer understands it will have to implement the ISAM "Global Sign-on (GSO)" to archive SSO with certain backend applications which do their own authentication and cannot be modified.

Which federated repositories configuration will address the customer requirements?

A. Use an external ISDS LDAP as the ISAM primary LDAP, federate with the AD and import all AD users into the ISAM TDS.

B. Configure the AD as the ISAM Primary LDAP, which will create the necessary secauthority= default suffix. Import all users into the ISAM AD.

C. Use the ISAM embedded LDAP as the Primary LDAP, federate with the AD and configure "basic user", and specify "basic-user-principal-attribute= samAccountName"

D. Use an external ISDS LDAP as the Primary LDAP, federate with the AD, configure "basic user", specify "basic-user-principal-attribute= samAccountName" and "basic-user-suffix= secauthority=default".

Correct Answer: C

QUESTION 5

A company is upgrading its existing IBM Security Access Manager (ISAM) environment to ISAM 9.0. Based on the requirements for the upgrade, activation keys have been procured for different ISAM modules.

Which two features require an activation key? (Choose two.)

A. REST APIs

B. Web Reverse Proxy

C. Authorization Server

D. Local Management Interface

E. Distributed Session Cache

Correct Answer: BE
