**QUESTION 1**

If an organization follows the ITIL best practices when considering a change to an existing service, where should they find the existing consumers of the service and the instances in use?

- A. In the operations run book
- B. In the operational architecture document
- C. In the configuration management database
- D. In the Service Registry

Correct Answer: C

QUESTION 2

A company is implementing a new Web service to provide the ability to access customer details as part of a number of high-volume business processes within an SOA environment.

During the deploy phase of the SOA lifecycle, which key quality assurance activity should occur?

- A. Tracking the service in the service registry.
- B. Assessing existing services that are part of the same business processes.
- C. Simulating the business process to find the optimum path length to ensure maximum throughput.
- D. Testing to ensure that the service meets performance targets for the business processes.

Correct Answer: D

QUESTION 3

In a legacy transformation project an Architect decides to drive CICS transactions using MQ messages generated by WebSphere Message Broker using a 3270 bridge. What is the advantage of this architecture?

- A. The flow is broken into several parts which means that processing is less complex.
- B. Fewer transactions are required to achieve processing.
- C. The requesting context is already established when the response from CICS is returned.
- D. A wide variety of sources and formats can be routed and transformed as needed.

Correct Answer: D

QUESTION 4

A retail company is faced with the challenge of quickly introducing new products involving components from multiple lines-of-business. How can adopting SOA help this company meet this challenge?

- A. By introducing an Enterprise Service Bus (ESB) to support services created from existing legacy application functions.
- B. By providing a single view of disparate data sources through the use of Information as a Service.
- C. By introducing a portal for access to components from multiple lines of business to provide integration at the glass.
- D. By identifying services in each Line of Business (LOB) that would support new product development and marketing business processes.

Correct Answer: D

QUESTION 5

A Fortune 100 company is migrating its Enterprise Application Integration (EAI) architecture to SOA. The intent is to begin exposing its capabilities to business partners. The CIO is thinking about building a high speed, custom messaging solution so there is capacity for future growth. What should the SOA Designer say about the long-term implications of that direction?

- A. A custom messaging solution could provide performance advantages if development priority is allocated to provide standards-based connectors and adapters for business partners to connect.
- B. XML messages can be transformed at wire speed using Enterprise Service Bus (ESB) appliances like WebSphere DataPower SOA Appliance, so it is not necessary to be concerned with that part of the system's performance.
- C. Total cost of ownership will increase with custom middleware. Open standards-based commercial messaging products are more interoperable, extensible, scalable, replaceable, and reliable than custom- built systems.
- D. It will take a serious commitment to detailed technical support to make this happen. It is always a tradeoff between standards-based compliance and performance. The implementation of the custom messaging will need to provide serious performance advantages to business partners.

Correct Answer: C
