-  **800,000+** Satisfied Customers

**QUESTION 1**

A company wishes to create a service from a legacy application that uses a simple but proprietary data format over a TCP/IP connection. What is an advantage of creating an adapter or wrapper to enable this application as a service?

- A. The legacy application will be made more highly available through the use of an adapter.
- B. The use of standards in the adapter will enable the legacy application to be used within a business process more easily.
- C. A wrapper will automatically generate valid XML datatypes to interoperate with all of the datatypes used by the legacy application.
- D. A wrapper can be added to the legacy application to control the Quality of Service (QoS).

Correct Answer: B

---

**QUESTION 2**

Two existing applications share common data with each having their own database. Since the data is replicated between the two of them every night, it leads to problems during the day when either application works with potentially outdated

data. The customer is considering SOA as a solution.

Which SOA approach can most effectively solve this problem?

- A. Design a service interface on top of both applications allowing exchange of the shared data in real time.
- B. Create an information integration layer exposed as services, then re-factor both applications to use those services.
- C. Consolidate both databases into one and establish proper locking algorithms to ensure data integrity.
- D. Design a new service that encapsulates the shared data between the two applications.

Correct Answer: B

---

**QUESTION 3**

Which issue must be addressed when abstract service definitions are mapped to IT components and are deployed into a runtime environment?

- A. Review of business models and system documentation for the business process in focus
- B. Decomposition of relevant existing systems into process flows, business rules, and potentially reusable components
- C. A choice of architecture alternatives for service implementation
- D. Orchestration of the services into higher level processes

Correct Answer: C

---

#### QUESTION 4

A retail company is faced with the challenge of quickly introducing new products involving components from multiple lines-of-business. How can adopting SOA help this company meet this challenge?

- A. By introducing an Enterprise Service Bus (ESB) to support services created from existing legacy application functions.
- B. By providing a single view of disparate data sources through the use of Information as a Service.
- C. By introducing a portal for access to components from multiple lines of business to provide integration at the glass.
- D. By identifying services in each Line of Business (LOB) that would support new product development and marketing business processes.

Correct Answer: D

---

#### QUESTION 5

An SOA Designer is collecting requirements for a global banking company's SOA project and discovers that various countries have different security encryption and privacy requirements. How should the SOA Designer handle this situation?

- A. Include multinational security encryption and privacy regulations as a nonfunctional requirement.
- B. Incorporate security software as part of the requirements.
- C. Recommend governance software as part of the requirements.
- D. Indicate the requirement to encrypt all data at every node only allowing decryption at final endpoints.

Correct Answer: A
