**QUESTION 1**

A solution developer implemented a message flow for a book store company which receives an XML input message. The input message is formed according to an XML schema supplied by the client and used by several other applications owned by the company. The input node uses XMLNSC parser to parse the input message. The image below depicts a sample XML input message. According to business needs, the bookDetails elements and all of its children are not referenced by the code. Performance test for the flow showed a significant time spent in message parsing time especially for large messages.

```
<bookstore>
  <book category="Cat1">
    <title>book1</title>
    <year>2009</year>
    <price>59.99</price>
    <bookDetails authorsCount=3 supplierCount=2>
      <Authors>
        <Author name="author1" email="aut1@srvr.com"/>
        <Author name="author2" email="aut2@srvr.com"/>
        <Author name="author3" email="aut3@srvr.com"/>
      </Authors>
      <Suppliers>
        <Supplier name="Supplier1" url="www.sup1.com"/>
        <Supplier name="Supplier2" url="www.sup2.com"/>
      </Suppliers>
    </bookDetails>
    <copies>40</copies>
  </book>
  <book category="Cat2">
  <book category="Cat3">
  <book category="Cat4">
  <book category="Cat5">
</bookstore>
```

What should the solution developer do to enhance the message parsing time ?

- A. Use the MRM parser instead.
- B. Set the parse timing to Complete.
- C. Set the parse timing option to On Demand.

D. Add the bookDetails element to the XMLNSC parse Opaque elements

Correct Answer: D

QUESTION 2

A solution developer is writing a message flow using the XMLNSC domain. Testing is producing the wrong output, and the solution developer is uncertain which node is causing the error. The solution developer adds a Trace node to display the contents of the data being passed. Which Trace node pattern will display the contents of the data?

- A. `#{Root}`
- B. `#{XMLNSC}`
- C. `#{InputRoot}`
- D. `#{InputXMLNSC}`

Correct Answer: A

QUESTION 3

An electronics store needs to enhance their online inventory verification system regarding available inventory for a requested product. Instead of returning the inventory count as a web response, an invoice for the purchase is to be generated and automatically sent to the online shipping system. Which web service standard and which SOAP node can the solution developer change to enhance the message flow?

- A. WS-Addressing and SOAPInput
- B. WS-Addressing and SOAPReply
- C. WS-Security and SOAPRequest
- D. WS-ReliableMessaging and SOAPAsyncRequest

Correct Answer: A

QUESTION 4

A solution developer needs to implement Web Services Reliable Messaging (WS- RM) on a message flow for a stock trading company. During unit testing, the solution developer determines that only the first of four messages, expected in order, have arrived at the destination. During troubleshooting, what conclusion must the solution developer come to?

- A. The second message in the sequence is lost, and so the third and fourth messages have not processed yet.
- B. The sequence number of message two has got out of sync and a reset needs to occur to allow the other messages to flow to their target.
- C. The data of message two is corrupt not allowing message three or four to be processed and those messages are

sitting on the reliable messaging source queue.

D. The data of message two is corrupt not allowing message three or four to be processed and those messages are sitting on the reliable messaging destination queue.

Correct Answer: A

QUESTION 5

A sample snippet of an incoming message is shown below.

```
<StockExchange>
  <Transaction>
    <ReferenceNumber>8310005071701</ReferenceNumber>
    <CurrencyCode>JPY</CurrencyCode>
    <Value>1000</Value>
    <Date>12/31/2012</Date>
  </Transaction>
</StockExchange>
```

A solution developer is asked to design a message model that only processes messages that contain an allowed list of currency codes and rejects other messages. How can the solution developer modify the message model to achieve this?

- A. Add the allowed currency codes in Fixed Value.
- B. Add the allowed currency codes in Default Value.
- C. Add the allowed currency codes in Enumerations.
- D. Add the currency codes in Block Substitution settings.

Correct Answer: C
