**QUESTION 1**

How does the "Save While Active" function work?

- A. A checkpoint image of the object is made and saved to media.
- B. It saves the entire object and uses the journal to reconstruct it at restore time.
- C. It uses journaling to cache read and write requests for the saved object from other jobs.
- D. An exit point program is used to manage temporary locks on the object by the save operation and any requesting jobs.

Correct Answer: A

QUESTION 2

What is the purpose of the Max Active parameter when creating or modifying a memory pool?

- A. It limits how many jobs can run concurrently.
- B. It limits the number of users which can access that memory.
- C. It limits the number of threads which can process concurrently.
- D. It limits cache availability for the subsystems assigned to the pool.

Correct Answer: C

QUESTION 3

What is an advantage of using an authorization list instead of a group profile?

- A. Authorization lists override individual object authority.
- B. An object can be authorized by many authorization lists, but only one group profile.
- C. Authorization lists provide *ALLOBJ access to both objects and programs used to update.
- D. Authorization lists allow different users to have individual authorities to the secured objects.

Correct Answer: D

QUESTION 4

A printer has jammed while in the middle of printing a large file. After clearing the jam, what is the next step or steps?

- A. Restart the writer, specifying the starting page number.

B. Hold the spooled file on the output queue. Release the spooled file.

C. Hold the writer. Clear the printer buffer by turning the printer off and then on. Release the writer.

D. Hold the spooled file. Clear the printer buffer by turning the printer off and then on. Restart the writer, specifying the starting page number.

Correct Answer: A

QUESTION 5

A daily job produces a large a number of spooled files. The administrator has changed the print file attributes to cause the print files to expire.

The administrator has noticed that even though spooled files are expired, they are not being removed from the system. What additional step must be taken to cause these spooled files to be removed from the system?

A. The system value QEXPSPLF must be set to "REMOVE."

B. The print files *EXPACTION parameter must be set to *REMOVE.

C. The Reclaim Spooled Storage (RCLSPLSTG) command must be run

D. The command DLTEXPSPLF must be run to remove the spool files.

Correct Answer: D
