

C90-05A^{Q&As}

Advanced Cloud Architecture

Pass SOA C90-05A Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

<https://www.pass4itsure.com/c90-05a.html>

100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by SOA Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

The Burst In compound pattern establishes a system that withdraws IT resources from an environment that has reached _____ level of utilization.

- A. a high
- B. a consistent
- C. a low
- D. an inconsistent

Correct Answer: C

QUESTION 2

The cloud architecture that is established by the application of the Storage Workload Management pattern can rely on the storage capacity monitor to: (Choose Two)

- A. notify the storage capacity system whenever a cloud storage device is being over-utilized
- B. migrate LUN5 to different cloud storage devices
- C. detect when the workload of a cloud storage device has reached a pre-defined threshold
- D. act as an external interlace to a cloud storage service

Correct Answer: AC

QUESTION 3

Applying the _____ pattern allows virtual servers to directly connect to the_____.

- A. Direct LUN Access, hypervisors
- B. Persistent Virtual Network Configuration, physical network cards
- C. Synchronized Operating State, operating system APIs
- D. Direct I/O Access, physical I/O cards

Correct Answer: D

QUESTION 4

The application of the Cross-Storage Device Vertical Tiering pattern establishes a system that: (Choose Two)

- A. horizontally scales across multiple redundant cloud storage devices
- B. vertically scales within a single cloud storage device
- C. can survive bandwidth and data processing power constraints
- D. vertically scales across multiple cloud storage devices

Correct Answer: CD

QUESTION 5

In a cloud architecture resulting from the application of the Cloud Bursting compound pattern, the _____ mechanism is used to maintain synchronizing between a cloud consumer's on-premise and cloud-based IT resources.

- A. hypervisor
- B. resource pooling
- C. automated scaling listener
- D. resource replication

Correct Answer: D
