QUESTION 1

A Power Systems server with SAN attached disk has redundant fibre HBAs and two paths provisioned through the SAN fabric.

One fibre HBA has been replaced, but the redundant path shows a failed status.

What is the most likely cause of this problem?

- A. The new adapter was not dynamically allocated to the partition.
- B. The multipathing exit program (QIBM_QZSC_SANP2) has failed.
- C. The multipathing daemon has failed.
- D. The WWPN has changed.

Correct Answer: D

QUESTION 2

What is an advantage of creating and using customized distribution media from the GO LICPGM menu to install licensed programs on multiple systems in a network?

- A. Object conversion for "ALLUSR is not needed when installed on a different partition.
- B. This can be done with no interruption to users and jobs on the system.
- C. Performing a post-save of a system after upgrading the OS is no longer necessary.
- D. All installed PTFs are already included with the selected licensed programs.

Correct Answer: D

QUESTION 3

Two HMCs manage the same server. An administrator recently upgraded the HMC firmware from level V8 R8.2 0 to V8 R8.3.0 on one of the consoles. Shortly after, a connection error "Version Mismatch..." appeared on the second console.

Which process will resume the functionality for the second console?

- A. Reboot the second HMC.
- B. Upgrade the second HMC to V8 R8.3.0, re-initialize the server connection, and restore the partition profiles
- C. Select Reset or Remove Connections on the second HMC to reset the connection

D. Install the latest service pack on the second HMC and re-initialize the server connection.

Correct Answer: C

QUESTION 4

Which statement is correct about installing system firmware on a single image system that has no HMC?

- A. The updates are concurrent when PowerVM Enterprise Edition is installed.
- B. The updates are always disruptive.
- C. The updates are concurrent when the firmware version stays the same.
- D. The updates are disruptive only when PowerVM Express is installed.

Correct Answer: B

QUESTION 5

Several printers were moved from one IP subnet to another overnight. The printers are accessed by their Fully Qualified Domain Name (FQDN). The FQDNs were changed to resolve to the new addresses the following morning, but the IBM i will still not print to the new printers. The printers can be pinged by their IP addresses.

What is the cause of this problem?

- A. The DNS server was not restarted to present the new addresses.
- B. The network route to the new subnet is missing.
- C. IBM i has cached the resolved IP address before the change.
- D. CHGDEVPRT was not run on each device to get the new address

Correct Answer: C
