**QUESTION 1**

Where can the operator immediately determine whether the backup has failed or succeeded?

- A. the Admin Center
- B. the Operations Center
- C. the Tivoli Monitoring tool
- D. the Tivoli Data Warehouse

Correct Answer: B

Explanation: The Overview page of the Operations Center includes the section: TSM Clients A client is considered to be at risk if a problem occurs during its most recent scheduled backup, or during a backup that starts within a specified time interval. The term backup also includes archive operations for Tivoli Storage Manager for Enterprise Resource Planning clients. Use the information that is shown in the TSM Clients section to check for failed or missed backups and to determine whether backup schedules are running as expected.

QUESTION 2

Which IBM Tivoli Storage Manager server database backup type can be taken offsite?

- A. image database backups
- B. database snapshot backups
- C. differential database backups
- D. high availability database backups

Correct Answer: B

Explanation: Snapshot database backups are typically used for off-site disaster recovery purposes.

Note: When the client backups are complete, the new data in the primary storage pools should be copied to a copy storage pool. The copy storage pool tapes, along with the database backup tapes, should be taken to a secure off-site location or vault. The copy storage pool and database backup tapes are referred to collectively as the off-site backups, and will be used to restore your environment in the event of a catastrophic failure or disaster.

QUESTION 3

Which product assists in creating fast application-aware backups and restores for hardware point-in-time copies?

- A. IBM Tivoli Storage Manager Enterprise Edition
- B. IBM Tivoli Data Protection Manager for Storage
- C. IBM Tivoli Storage Manager Snapshot Manager

D. IBM Tivoli Storage Manager FlashCopy Manager

Correct Answer: D

Explanation: IBM Tivoli Storage FlashCopy Manager uses the copy services capabilities of intelligent disk subsystems to create point-in-time copies. These are application aware copies (FlashCopy or snapshot) of the production data. This copy is then retained on disk as backup allowing for a fast restore operation (Flashback).

QUESTION 4

What additional level of security can be used during the transfer of data from client and server?

- A. encryption
- B. compression
- C. deduplication
- D. data shredding

Correct Answer: A

Explanation: You can encrypt the data as well.

QUESTION 5

What is the main difference between backup and archive?

- A. Backup is only for databases.
- B. Backup is run daily and archive is not.
- C. Backup goes to disk and archive goes to tape.
- D. Backup provides versioning and archive does not.

Correct Answer: D

Explanation: There are two copy groups that can be defined within a management class, the Backup copy group and the Archive copy group. The key difference between the two can be summarized in one word, versions. The backup feature keeps and maintains versions of backup data whereas the archive feature retains a long term copy of data without storing or maintaining versions.
