QUESTION 1

Once the nightly backups are finished, what is one additional way to protect the files?

- A. run dedupe
- B. expire the database inventory
- C. migrate the primary storage pools to the copy storage pools
- D. back up the primary storage pools to the copy storage pools

Correct Answer: D

Explanation: After the initial full backup of your storage pools, incremental storage pool backups are done nightly.

QUESTION 2

What does the message ANR***W format indicate?

- A. This is a client warning message.
- B. This is an informational message.
- C. This message was posted Wednesday.
- D. This is a Tivoli Storage Manager server warning message

Correct Answer: D

Explanation: Server ANR messages list. Examples:

ANR0107W: Source file(line number): Transaction transaction ID was not committed due to an internal error.

ANR0115W: The server script script name attempted to start more parallel commands than are allowed for a single script. A single script is limited to parallel command limit parallel commands.

ANR0116W: The server script script name attempted to start more parallel commands than are allowed for the server. The server is limited to parallel command limit parallel commands.

QUESTION 3

Which option meets the requirement to provide online snapshot backups for an enterprise Oracle database?

- A. Rocket Device Adapter Pack
- B. IBM Backup-Archive for Oracle

- C. IBM Tivoli Storage Manager FastBack
- D. IBM Tivoli Storage FlashCopy Manager

Correct Answer: C

Reference: Best Practices Guide for Oracle Databases with IBM XIV Storage System Snapshots, XIV Snapshots for Backup/Restore using Tivoli Storage FlashCopy Manager

QUESTION 4

Which two statements describe the process of collocation?

- A. Placing IBM Tivoli Storage Manager (TSM) database volumes in the same directories.
- B. Isolating archive and backup data to separate storage pools.
- C. Combining multiple TSM servers onto a single physical server.
- D. Isolating a client or group of clients to their own volumes within a storage pool.
- E. Isolating a single or group of filespaces to their own volumes within a storage pool.

Correct Answer: DE

Explanation: * When collocation is by client node Volume selection order: 1st: A volume that already contains files from the same client node

* When collocation is by file space Volume selection order: 1st: A volume that already contains files from the same file space of that client node

Note: With collocation enabled, the server attempts to keep files belonging to a group of client nodes, a single client node, or client file space on a minimal number of sequential- access storage volumes. Collocation reduces the number of volume mounts required when users restore, retrieve, or recall a large number of files from the storage pool. Collocation thus reduces the amount of time required for these operations.

QUESTION 5

How does SnapDiff determine which files have changed?

- A. It uses journal based backup.
- B. It scans the file system for changed blocks.
- C. It compares the TOC stored in the TSM database.
- D. It runs an incremental backup of the files that were reported as changed by the filer.

Correct Answer: D

Explanation: Using the snapdiff option with the incremental command streamlines the incremental backup process. The command runs an incremental backup of the files that were reported as changed by NetApp instead of scanning all of the volume for changed files
