**QUESTION 1**

What is the purpose of POSTSCHEDULECMD option in the IBM Spectrum Protect backup-archive client option file?

- A. specifies the number of times the schedule needs to be run after a first successful completion
- B. specifies a command that the client program processes after it runs any schedule
- C. specifies any delay in seconds of the scheduled action
- D. specifies the command to run for stopping the scheduler service if it receives an error

Correct Answer: B

The postschedulecmd/postnschedulecmd option specifies a command that the client program processes after it runs a schedule. If you want the client program to wait for the command to complete before it continues with other processing, use the postschedulecmd option. If you do not want to wait for the command to complete before the client continues with other processing, specify the postnschedulecmd.

QUESTION 2

On an IBM Spectrum Protect Windows server, which utility can be used to identify disk bottlenecks?

- A. monitor
- B. perfstat
- C. perform
- D. nmon

Correct Answer: B

QUESTION 3

How is the amount of client data backed up during the last 24 hours determined?

- A. run QUERY SUMMARY BEGIND= ? administrative command
- B. use the command line builder within the Operations Center and run Q BACKUP BEGIND=1
- C. look at the Activity pane in the IBM Spectrum Protect Operations Center
- D. from the administrative command line run QUERY OCCUPANCY -ALL

Correct Answer: D

QUERY OCCUPANCY (Query client file spaces in storage pools)

Use this command to show where client file spaces are stored and how much space they occupy.

Incorrect Answers:

B: The query backup command displays a list of backup versions of your files that are stored on the IBM Spectrum Protect server, or that are inside a backup set from the server when the backupsetname option is specified.
