-  **800,000+** Satisfied Customers

QUESTION 1

An administrator wants to create an IBM Spectrum Protect administrator that can only access a specific node through the web backup-archive client and the local backup-archive client. Which access should be granted?

- A. System authority
- B. Node owner authority
- C. Node access authority
- D. Node Operator authority

Correct Answer: B

QUESTION 2

How would an administrator restore data to a different node?

- A. use the filespace -newnode option
- B. use the GRANT ACCESS command to allow access to another node
- C. use the -fromnode option
- D. use the -tonode option

Correct Answer: C

Restoring or retrieving files from another client node

If you are using commands, use the fromnode and fromowner options to indicate the node name and the name of the user who owns the files. For example, to restore files to one of your own file systems that were backed up from a workstation named Node1 and owned by a user named Ann, enter:

```
dsmc restore -fromn=node1 -fromo=ann "/home/proj/*" /home/gillis/
```

QUESTION 3

What is the purpose of REVOKEREMOTEACCESS?

- A. Restrict access from any node
- B. Disable remote access to the server

- C. Disable the web client
- D. Restrict administrators with client access privilege

Correct Answer: D

QUESTION 4

Which two LAN-free client options should be considered when attempting to tune restore performance? (Choose two.)

- A. txngroupmax
- B. diskbuffsize
- C. resourceutilization
- D. tcpbytelimit
- E. tcptxntime

Correct Answer: AD

The following options are designed to control the transaction size for a Tivoli Storage Manager client/server session for the backup-archive client: txngroupmax

The txngroupmax option specifies the maximum number of objects (files and directories) that are included in a client session transaction. For Tivoli Storage Manager 5.2 and later, this option is set globally for the Tivoli Storage Manager server and can be set individually for each node by issuing the UPDATE NODE command. txnbytelimit

The txnbytelimit option specifies the maximum object size in KB that is included in a client session transaction. A single file exceeding this size is always processed as a single transaction.

QUESTION 5

What is the purpose of a container-copy storage pool?

- A. To protect a cloud-container storage pool in a single server environment
- B. To protect a directory-container storage pool in a single server environment
- C. To protect a directory-container storage pool in a single-server environment that uses replication
- D. To protect a cloud-container storage pool in a multi-server environment that uses replication

Correct Answer: C
