QUESTION 1

Two workstations are installed with the full IBM Rational Performance Tester 8.2 product in addition to a server that is installed with the IBM Rational Agent Controller. Stress testing is conducted with all the machines. Response time breakdown data is collected. Later the tester discovers that the data was in fact not collected. What are four probable causes? (Choose four.)

- A. The server has not been instrumented.
- B. IBM Rational Performance Tester is running on the other workstation.
- C. The response time breakdown collection has not been enabled.
- D. The firewall between the server and the two servers has not been opened.
- E. IBM Rational Performance Tester 8.2 is not compatible with IBM Rational Agent Controller.
- F. IBM Rational Agent Controller is not running on the workstation.

Correct Answer: ACDE

QUESTION 2

Which three factors affect the performance test measurements? (Choose three.)

- A. sampling interval
- B. network bandwidth
- C. think time
- D. verification points
- E. user load

Correct Answer: BCD

QUESTION 3

What is the purpose of enhancing schedules?

- A. to increase the performance of the test
- B. to emulate workload analysis as closely as possible
- C. to create a group of tests to run
- D. to determine the best time to run a test

Correct Answer: B

QUESTION 4

When using custom code, what is a good idea?

- A. change the package name and class name
- B. comment the Java code well
- C. move the package outside of the src directory
- D. use a meaningful class name

Correct Answer: A

QUESTION 5

What are three typical goals of performance testing? (Choose three.)

- A. identification of system response times
- B. capacity planning
- C. monitoring the network traffic
- D. scalability testing
- E. Think time determination

Correct Answer: ABD
