**QUESTION 1**

Where does the test connection operation occur for a data source configure at cluster scope?

- A. Deployment manager process
- B. Each server process in the cluster
- C. Node agent for each node that contains a cluster member
- D. Node agent for one of the nodes that contain a cluster member

Correct Answer: C

Reference: https://www.ibm.com/support/knowledgecenter/en/SSAW57_9.0.0/com.ibm.websphere.nd.multiplatform.doc/ae/cdat_testcon.html

QUESTION 2

Which tool can be used to collect data to be used for monitoring and tuning the environment?

- A. Thread and Monitor Dump Analyzer
- B. Performance Monitoring Infrastructure
- C. IBM Tivoli Performance Viewer Advisor
- D. Garbage Collection and Memory Visualizer

Correct Answer: B

WebSphere Application Server provides Performance Monitoring Infrastructure (PMI) data to help monitor the overall health of the WebSphere Application Server environment. PMI provides average statistics on WebSphere Application Server resources, application resources, and system metrics. Many statistics are available in WebSphere Application Server, and you might want to understand the ones that most directly measure your site's resources to detect problems.

QUESTION 3

Which two IBM WebSphere Application Server components should administrators consider when planning for a high availability environment? (Choose two.)

- A. User registries
- B. Messaging engines
- C. Caching proxy servers

D. Back-end servers, such as database, enterprise information systems, etc.

E. Containers, such as the web, Enterprise JavaBeans (EJB), and Session Initiation Protocol (SIP)

Correct Answer: BE

QUESTION 4

When installing applications to IBM WebSphere Application Server, what is one important difference between RAR files and SAR, WAR, EAR, and JAR files?

A. They contain no Java code.

B. They are deployed to the web server.

C. They can be installed at different scopes.

D. They use a different compression protocol.

Correct Answer: B

QUESTION 5

Which of the following is true about certificate expiration monitoring?

A. Must be run manually.

B. Must be run on the deployment manager.

C. Deletes the certificates after they are expired, but does not replace them.

D. Can replace expired certificates or certificates in the expiration threshold with a new certificate

Correct Answer: D

Certificate monitor configuration settings can be configured on the administrative console by selecting Security > SSL certificate and key management > Manage certificate expiration. . On the Manage certificate expiration panel, you can perform the following functions. Set the expiration threshold in the box labeled Expiration replacement threshold. The expiration replacement threshold is the number of days before a certificate expiration that a certificate can be replaced and has a default value of 60 days. Delete the certificates after they are replaced by selecting the Delete expiring certificates and signers after replacement box. This box is selected by default. Etc.
