## QUESTION 1

A BPM application developer is using an event sub process to implement a cancellation pattern for a Business Process Definition (BPD) as in the following diagram.

The following requirements must be met:

Cancellation can occur at any point in time during execution.

All the activities should be interrupted once the cancellation has been issued. How must the BPM application developer configure the event sub process?

- A. Select the Interrupt Parent Process option in the start event of the event sub process.
- B. Call the `API.tw.system.interruptParentProcess()` at the beginning of the event sub process.
- C. Select the event sub process and under implementation properties select the Interrupt Parent Process option.
- D. Attach the intermediate message event (IME) to each activity in the BPD. Associate the same UCA that starts the event sub process to each IME. Select the Interrupt Activity option on all IMEs.

Correct Answer: D

## QUESTION 2

A financial services company has an account opening process that can last for several days or weeks as it waits for customers to supply additional information by mail. During that time the customer may call the company to inquire the status of

the process, so the customer service representatives use the Processes tab in Process Portal to view the details of the

process.

The company has determined the default instance details view doesn't contain all of the information needed. The BPM application developer has been tasked with providing a modified instance details view for this process that contains all of the

necessary information.

What actions can the BPM application developer take to modify the instance details view to meet the needs of the business? (Choose 2)

- A. Create a new heritage human service, modify it to meet the requirements and expose it as a dashboard in the Process Portal.
- B. Create a new client side human service, modify it to meet the requirements and expose it as a dashboard in the Process Portal.
- C. Create a new client side human service by clicking on the new button of the details UI on the Views tab of the business process diagram and modify it to meet the requirements.
- D. Create a new heritage human service in the process application, select it for the details UI on the Views tab of the business process diagram and modify it to meet the requirements.
- E. Copy the instance details UI Service Template from the dashboards toolkit in the process application, modify it to meet the requirements and select it for the details UI on the views tab of the business process diagram.

Correct Answer: AB

---

### QUESTION 3

A BPM application developer needs to create a custom dashboard to show the maximum, minimum and average sales in the last 12 months. Only the sales managers can view the data in the dashboard in the process portal. In the exposure section of the custom dashboard, which setting must the application developer set for the sales manager to view the data?

- A. Set the "Expose to" field to Sales Managers.
- B. Set the "Expose to start" field to Sales Managers.
- C. Set the "Expose Business Data" field to Sales Managers.
- D. Set the "Expose Performance Metrics" field to Sales Managers.

Correct Answer: A

---

### QUESTION 4

A BPM application developer removes an activity from a Business Process Definition (BPD) and creates a new snapshot to be deployed. The process application is already deployed and some of the existing instances from the previous snapshot

have a token on the removed activity.

What must the BPM application developer do to move those tokens to the correct activity?

- A. Use the BPMCreateOfflinePackage along with the orphanTokens option to create an offline deployment package.
- B. Create a general service to automatically move the tokens once the snapshot is deployed.
- C. Create a section for the 100Custom.xml file to specify the activity where the tokens should be moved so they can add it to the Process Server.
- D. Create a policy migration file using the AdminTask.PBMCheackOrphanTokens command. Specify in the file the next activity where those tokens should be moved. Use the policy file to migrate the in-flight instances using the Process Admin console.

Correct Answer: D

---

### QUESTION 5

A BPM Application developer is developing a new process application in IBM Business Process Manager V8.5.5. which condition must a BPM application developer choose to use a heritage human service over a client side human service?

- A. The web editor is preferred.
- B. The process application requires runtime collaboration support.
- C. The process application requires runtime case management support.
- D. The human service needs to minimize server-side calls in user interfaces.

Correct Answer: A
