**QUESTION 1**

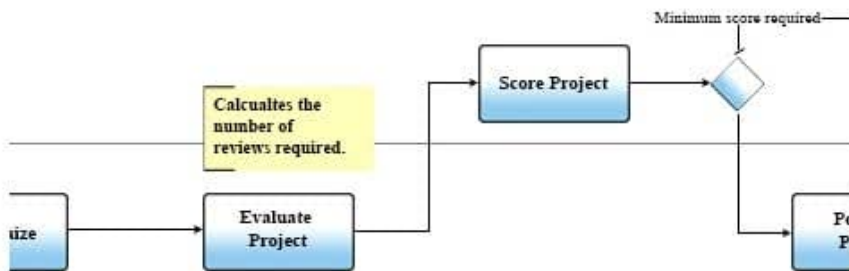

A BPM application developer has enabled auto-trackini for a car tire production and run the update trackini definitions command in process designer. During a playback, the BPM application developer is asked to rename the auto-trackini group from "at1392376481525" to "tireProduction" and run update trackini definitions again. When building a custom dashboard, what resource should the BPM application developer use to retrieve the data?

- A. The "tireProduction" view for the "tireProduction" table.
- B. The "tireProduction" view for the "at1392376481525" table.
- C. The "at1392376481525" view for the "tireProduction" table.
- D. The "at1392376481525" view for the "at1392376481525" table.

Correct Answer: B

QUESTION 2

A construction company is using IBM business process manager to review projects. Every project should be reviewed and scored by several subject matter experts (SME) before it is approved. The number of reviews depends on a business rule that is evaluated at runtime. All the reviews should be executed at the same time by a different SME. Each review is recorded individually and should include the SME user ID. The company decided that no specific order is required for the final list of completed reviews. If the score of the process reaches the minimal total score required before all the reviews have been completed, the process should continue and all pending review should be interrupted. For this requirement, a BPM application developer is using a multi-instance loop (user task) and a decision task. The following JavaScript function is included in a server file. The minimumScoreReached function is defined so that the order of the final list of completed reviews is not supported.

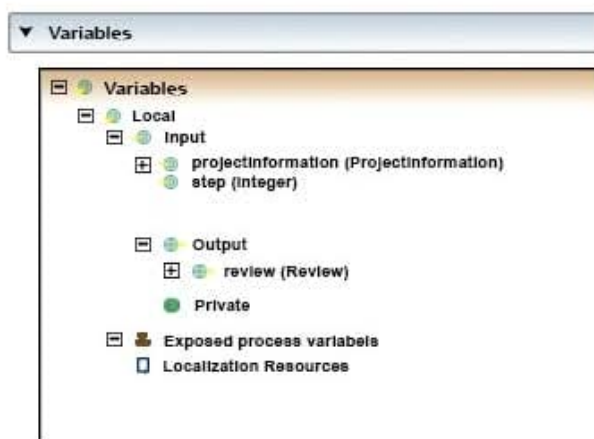

```
1 var Namespace = {
2   minimumScoreReached : function () {
3     var reviews = tw.local.reviews;
4     var limit = reviews.Listlength; var score = 0;
5     for ( var idx = 0 : idx < limit : idx++ ) {
6       score += reviews[idx].score;
7     }
8     log.info ( "log" score "" + score );
9     log.info ( "log" minimum score "" + tw.epv.exposedProjectVariables.minimumScore );
10    return (score > tw.epv.exposedProjectVariables.minimumScore) ? true : false;
11  }
12 }
```

Variable in the Business Process Definition (BPD) are defined as follow:

Variable for **Score Project** task are:

▼ Behavior

Loop Type:

▼ Multiple-instance Loop

Start Quantity:

Ordering:

Flow Condition:

Complex Flow Condition:

Cancel Remaining Instances: ☒

▼ Simple Loop

▼ Input Mapping

▼ Output Mapping

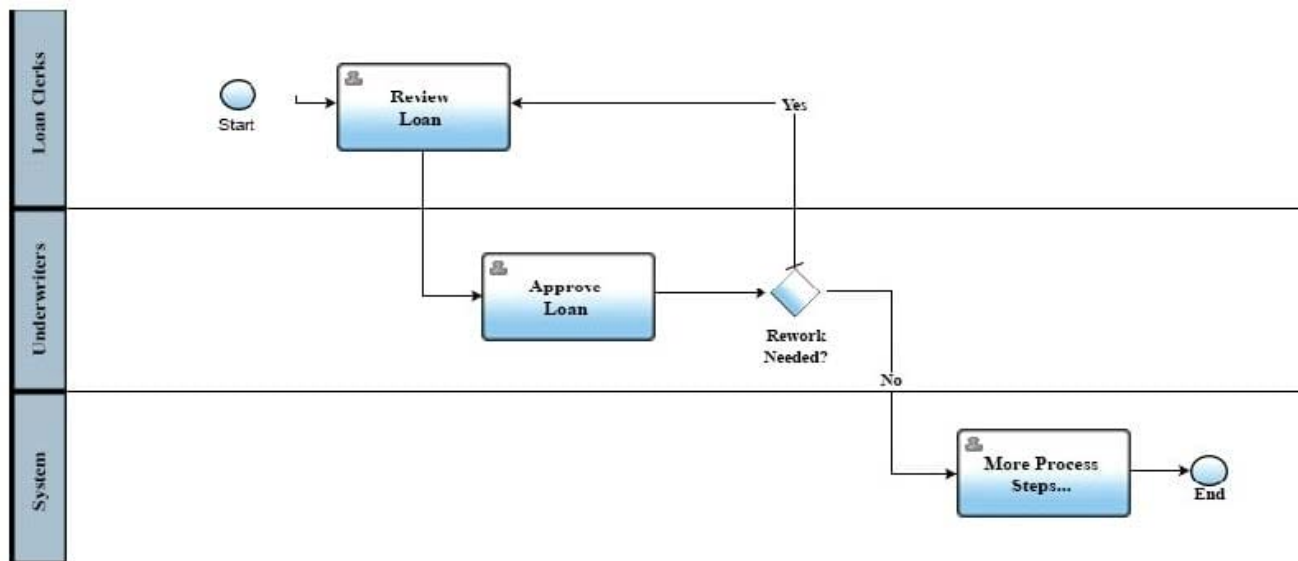

How should the BPM application developer configure the behavior and data mapping for the multi-instance loop? (choose 2)

- A. Map review output variable to tw.local.reviews Q in the Output Mapping section.
- B. Map review output variable to tw.local.reviews [tw.local.reviews.listLength] in the Output Mapping section.
- C. Write Namespace.minimumScoreReachedQ in the Complex Flow Condition field
- D. Write return Namespace.minimumScoreReachedQ in the Complex Flow Condition field
- E. Add a new step output variable to the human service, and then use the following in the Output Mapping section: Map step output variable to tw.local.step Map review output variable to tw.local.reviews! tw.local.step]

Correct Answer: DE

QUESTION 3

A bank is implementing a new loan request process as shown in the following Business Process Definition (BPD):

The bank has analyzed the process and determined that rework happens 80% of the time. Interviews of the loan clerks who perform the review loan step show that the work to review the loan is complicated, and that help from more experienced clerks would benefit the less experienced clerks and reduce the amount of rework required. The bank has done some research to identify the list of their most experienced loan clerks and requires the less experienced loan clerks

to use the collaboration feature to get help from the more experienced clerks that are available.

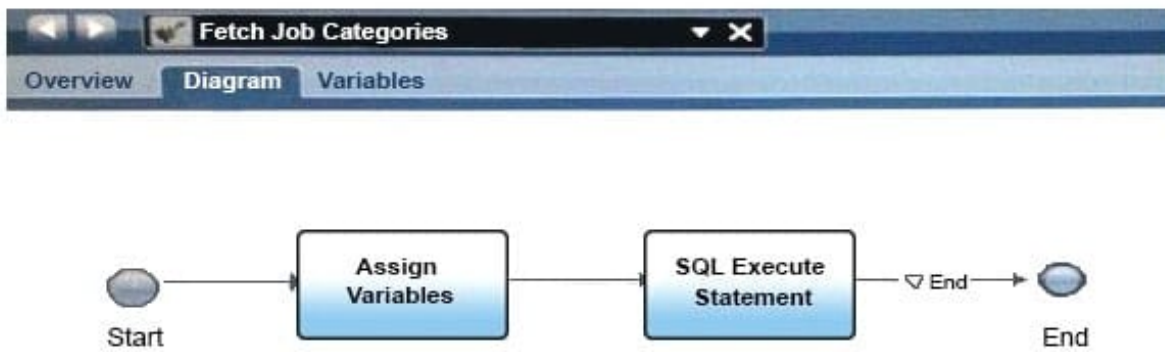

What actions should the BPM application developer take to meet this requirement?

- A. Use a team filter service to add the list of experienced users to the Loan Clerks team.
- B. Use a team retrieval service to add the list of experienced users to the Loan Clerks team.
- C. Add the list of experienced clerks to a new team and assign the new team as an expert team on the Review Loan task.
- D. Add the list of experienced clerks to a new team and assign the new team as a managers team of the Loans Clerks team.

Correct Answer: B

QUESTION 4

A BPM application developer would like to retrieve the Job Categories for a job position from the database. The BPM application developer has created the following integration service "Fetch Job Categories" to connect with the database and to retrieve the job categories.

What does the BPM application developer need to do to implement this service successfully? (choose 2)

- A. Specify the data mapping fields for the SQL Execute Statement.
- B. Provide the Java implementation for the SQL Execute Statement.
- C. Create a data source in the process admin console for this application database.
- D. Select Local in the Local/Global transaction field in the SQL Execute Statement Configuration.
- E. Use a data source defined in the WebSphere Application Server for this application database.

Correct Answer: CE

QUESTION 5

A BPM Application developer needs to customize the Process Performance and Team Performance dashboards to meet corporate requirements. To do so, what should BPM application developer do?

- A. Make the dashboards editable in the dashboards toolkit, make the changes, take a new snapshot, and deploy the toolkit.
- B. Clone the most recent snapshot of the Dashboards toolkit, make the changes, take a new snapshot, and deploy the toolkit.
- C. Clone the most recent snapshot of the Process Portal Application, make the changes and deploy the customized Portal Process application.
- D. Create new Process and Team Performance dashboards in a new process application, configure Process Portal to use the new dashboards, and deploy the process application

Correct Answer: B
