**QUESTION 1**

In a mediation flow, the output terminal of a mediation primitive is unwired. What would be the behavior of this mediation flow during build time and/or runtime?

- A. It throws several errors during build time in WebSphere Integration Developer.
- B. The build succeeds but when deployed, the mediation flow throws a RuntimeException.
- C. It generates a warning during build time, and at runtime, the unwired output terminal stops this path in the flow and the message is lost silently.
- D. It generates a warning during build time, and at runtime, the unwired output terminal stops this path in the flow with a MediationRuntimeException.

Correct Answer: C

QUESTION 2

According to SOA principles, which of the following BEST describes the interaction between services?

- A. Services are integrated and mediated by service modules.
- B. Services are integrated and mediated by an enterprise service bus.
- C. Services directly interact with each other through references.
- D. Services intercept and modify messages as they are passed between providers and requesters.

Correct Answer: B

QUESTION 3

An integration developer has been tasked with consolidating common artifacts that are currently defined and used in separate unrelated mediation modules.

Which of the following should be done?

- A. Both common business objects and common XML maps should be consolidated into a shared library.
- B. Neither common business objects nor common XML maps should be consolidated into a shared library.
- C. Business objects used by XML maps should not be consolidated into a shared library, but common XML maps should be
- D. XML maps should not be consolidated into a shared library but common business objects used in XML maps should be.

Correct Answer: C

**QUESTION 4**

An integration developer is creating a test configuration using the integration test client (ITC). Which of the following statements are applicable to the test configuration?

- A. Test configuration is used to control a unit test.
- B. Test bucket can be customized for a specific test case.
- C. Test bucket configuration is used to customize and control a component test.
- D. The integration developer can create only one test bucket configuration.
- E. The integration developer can save one open test configuration per test configuration.

Correct Answer: AC

QUESTION 5

An integration developer is debugging Common Base Event errors reported by a customer from a deployed SCA module in a stand-alone environment. Which log file should the integration developer investigate to locate events emitted from the CEI?

- A. SystemErr.log
- B. SystemOut.log
- C. startServer.log
- D. first failure data capture log

Correct Answer: B
