QUESTION 1

An integration solutions developer needs to create a module with a many-to-many mapping between service requesters and service providers supporting Web services.

Using the patterns explorer, which pattern would be most appropriate?

- A. Proxy Service Gateway
- B. Static Service Gateway
- C. Dynamic Service Gateway
- D. Dynamic Simple Service Proxy

Correct Answer: A

QUESTION 2

An integration developer needs to use the data pool available in WebSphere Integration Developer.

Which of the following options are applicable to the data pool editor?

- A. Manage test cases for data pools.
- B. Manage of unit test project for data pools.
- C. Allows developer to open multiple data pools.
- D. Allows source control operation for data pools.
- E. Facilitates values to be copied between data pools.

Correct Answer: BD

QUESTION 3

An integration team is developing a new mediation flow.

The team has a requirement that when an error occurs at any point in any of the mediation flows, the error must be logged and handled in the exact same fashion regardless of the point of failure.

What is the BEST way to implement this requirement within the mediation flow? Implement the error handling mechanism:

- A. using a Trace primitive to log the required information.
- B. using the Message Logger primitive wired to each fail terminal.
- C. as a Mediation Subflow and wire each fail terminal to this Subflow.

D. as a separate mediation module and invoke it whenever an error occurs.

Correct Answer: A

QUESTION 4

An integration developer has been tasked with consolidating common artifacts that are currently defined and used in separate unrelated mediation modules.

Which of the following should be done?

- A. Both common business objects and common XML maps should be consolidated into a shared library.
- B. Neither common business objects nor common XML maps should be consolidated into a shared library.
- C. Business objects used by XML maps should not be consolidated into a shared library, but common XML maps should be
- D. XML maps should not be consolidated into a shared library but common business objects used in XML maps should be.

Correct Answer: C

QUESTION 5

Two integration developers are working on the same mediation module using WebSphere Integration Developer. The module code needs to be merged at the end of each day so that the developers start at the same completion level next day. Which of the following options is the correct way to achieve this with respect to the versioning support in WebSphere Integration Developer? The developers can:

- A. continue working on their individual versions of the projects and use the `compare projects` feature at the beginning of each day.
- B. continue working on their individual versions of the projects and merge them using a source control tool at the end of each day.
- C. maintain multiple versions of the projects in their respective workspaces and use the `merge projects` feature at the end of each day.
- D. maintain multiple versions of the projects in their respective workspaces and use the `synchronize projects` feature at the end of each day.

Correct Answer: B
