**QUESTION 1**

A company loads data every night from several source systems into multiple tables in SAP HANA using complex transformation rules. The calculation view that joins these tables performs unexpectedly slow.

Which of the following could you investigate to be able to improve performance? (Choose two)

- A. Whether the joins and transformations of the tables can be moved to the data loading process of SAP BusinessObjects Data Services.
- B. Whether an InfoCube compression is running.
- C. Whether the calculation view needs to create large intermediate result sets.
- D. Whether savepoints are written during execution.

Correct Answer: AC

QUESTION 2

What is the lowest level of granularity you can use in an analytic privilege?

- A. A view
- B. A column
- C. An attribute value
- D. An attribute

Correct Answer: C

QUESTION 3

Which security settings can you apply in analytic privileges? (Choose two)

- A. Grant access to analytic views.
- B. Restrict access within an analytic view using measure values.
- C. Restrict access within an analytic view using attribute values.
- D. Restrict access to hierarchies.

Correct Answer: AC

QUESTION 4

Which of the following is a best practice in calculation views?

- A. Change an attribute to a measure.
- B. Apply a static filter on a projection node.
- C. Push calculations down to the attribute views.
- D. Combine analytic views with a join node.

Correct Answer: B

QUESTION 5

How can you improve the performance of a scripted calculation view?

- A. Read data from column tables using nested SELECT statements
- B. Convert SQL code to equivalent CE functions
- C. Combine analytic views using a CE_JOIN function
- D. Combine data from the row store and column store

Correct Answer: B
